Comparative Grand Strategy Thierry Balzacq, Peter Dombrowski, Simon Reich, 2019-05-28 This book develops a new approach in explaining how a nation's Grand Strategy is constituted how to assess its merits and how grand strategies may be comparatively evaluated within a broader framework The volume responds to three key problems common to both academia and policymaking First the literature on the concept of grand strategy generally focuses on the United States offering no framework for comparative analysis Indeed many proponents of US grand strategy suggest that the concept can only be applied at most to a very few great powers such as China and Russia Second characteristically it remains prescriptive rather than explanatory ignoring the central conundrum of why differing countries respond in contrasting ways to similar pressures Third it often understates the significance of domestic politics and policymaking in the formulation of grand strategies emphasizing mainly systemic pressures This book addresses these problems It seeks to analyze and explain grand strategies through the intersection of domestic and international politics in ten countries grouped distinctively as great powers The G5 regional powers Brazil and India and pivotal powers hostile to each other who are able to destabilize the global system Iran Israel and Saudi Arabia The book thus employs a comparative framework that describes and explains why and how domestic actors and mechanisms coupled with external pressures create specific national strategies Overall the book aims to fashion a valid cross contextual framework for an emerging research program on grand strategic analysis

Karplus, 2013-11-11 Each day we are bombarded with news of a new catastrophe of worldwide proportions promising to obliterate a part if not all of humankind Confronted with these warnings of impending doom our best defense is to understand how valid or invalid these predictions of calamity are By perceiving these threats in a wise and sagacious way we can best meet future challenges by not earmarking precious resources for wrong or misleading reasons Walter Karplus a professor of computer sciences at UCLA in his 35 years of experience has made predictions for all kinds of phenomena by generating models and computer simulations His decades of experience have taught him what we can and cannot predict with any accuracy Dr Karplus surveys the most hotly debated catastrophes that many scientists have predicted will imminently endanger the lives of countless people all over the globe These catastrophes include the depletion of the ozone layer the Greenhouse Effect nuclear radiation acid rain the AIDS epidemic the population explosion another Great Depression and earthquakes Drawing on his superb background he assesses the strengths and weaknesses of arguments propounding the seriousness of these calamities All the while he never allows us to lose sight of the profound shortcomings of scientific prediction In his singularly engaging manner Dr Karplus traces the
