Farmer-Financed Irrigation Leslie E. Small, Ian Carruthers, 1991-10-10 This book examines the potentials and limitations of user fees for financing irrigation operation and maintenance **Water for Agriculture** Stephen Merrett, 2002-03-01 Between the years 2000 and 2025 the world's population is expected to rise from six billion to about 8 billion At the present time irrigated agriculture provides one third of world food output So the advance of the irrigated sector on a global scale is a vital part of the development of the human race's capacity to feed itself This requires many skills including an economic understanding of the role of water in the irrigation and drainage of farmland The purpose of this book is to provide a text in securing such an understanding that will assist both students and professionals in the fields of agriculture development studies geography hydrology and planning As an introduction to the subject no prior knowledge of economic theory is assumed The scope of the book is wide both in its analysis and its geographical coverage A general introduction to irrigation and to economics is followed by a treatment of farmer's need for irrigation water and the costs they face in accessing it Three chapters cover the supply side infrastructure operation and maintenance An introduction is next given to the economic evaluation of irrigation and drainage projects continuing with a consideration of water allocation between sectors at the regional level The book ends with a summary of the analysis as well as sixteen proposals for policy development The approach is to make it possible for readers from a variety of backgrounds to readily access the subject matter Each chapter begins with general analytic themes and is followed by one or two detailed case studies drawn from Australia Brazil England India the Mediterranean Mexico Pakistan Palestine the Philippines and the USA The desire is to continually interrelate theory and fieldwork in an argument that is clearly expressed well structured and as easy to read as the subject permits The book is the first of its kind published since 1981 *The Economics of Irrigation in the United States*, 1958 *The Economics of Irrigation in the United States*, 1958 Economic of Irrigation Carruthers I., Clark C., 1978

Economics of Irrigation Water Management Hasan Dudu, Singqobile Chumi, 2012 Water policy is an important topic on the agenda of the international community and efficiency and equity in the allocation of water have emerged as important factors to be considered Water pricing can be used to mitigate both the quantity and quality dimensions of water scarcity This paper reviews partial equilibrium models and general equilibrium models that are relevant to irrigation water management issues The most widely discussed issues in these models are water markets and water pricing The interrelationships between economic cultural social and political aspects that are related to water policy make it difficult to provide a comprehensive policy analysis General equilibrium models of irrigation water management allow incorporation of

both the irrigation sector and the other sectors in the economy and analysis of policies affecting each of them and the interaction between them In addition to being able to address sector and household specifications production factors time horizon pricing policies and institutions such as water markets general equilibrium models allow the analysis of the impact of water policies on equity and poverty alleviation The authors conclude that although there has been a significant increase in efforts to analyze water related problems analytical and empirical research in the field is still deficient and more effort is needed to address them **Irrigation Institutions** Elwood Mead,1910 Water for Agriculture Stephen

Merrett,2003-08-02 World population is set to increase by a third in the next 25 years with no corresponding increase in global rainfall About seventy per cent of the world s abstracted water is used in farming and therefore the economics of irrigation is becoming an increasingly important issue for sustainable development Water for Agriculture provides a thorough overview of this highly topical subject written in a clear and accessible style The Scope of the book is wide both in its analysis and in its geographical coverage Topics covered include the infrastructure operation and maintenance of irrigation service supply the supply of drainage services economic cost benefit analysis water resource planning at the regional scale political economy and irrigation policy The content of Water for Agriculture is enhanced by numerous tables diagrams and in depth case studies This book will be an essential read for those professionals involved in the planning of water resources and for advanced students studying this topic as part of agriculture development studies economics engineering environmental science geography hydrology and planning courses *The Economics of Irrigation* Richard Theodore Ely,1903 **The**

Zilberman,2012-12-06 Jan van Schilfgaarde USDA Agricultural Research Service and National Research Council Committee on Irrigation Induced Water Quality Problems In 1982 a startling discovery was made Many waterbirds in Kesterson National Wildlife Refuge were dying or suffering reproductive failure Located in the San Joaquin Valley Valley of California the Kesterson Reservoir Kesterson was used to store agricultural drainage water and it was soon determined that the probable cause of the damage to wildlife was high concentrations of selenium derived from the water and water organisms in the reservoir This discovery drastically changed numerous aspects of water management in California and especially affected irrigated agriculture In fact the repercussions spilled over to much of the Western United States For a century water development for irrigation has been a religiously pursued means for economic development of the West The primary objective of the Reclamation Act of 1902 was purportedly the development of irrigation water to support family farms which in turn would enhance the regional economy Worster 1985 The Economics of Tropical Farming Systems Martin

M.G. Chandrakanth,2015-10-07 This book uses resource economics costing approaches incorporating externalities to estimate the returns for the country's irrigation and demonstrates how underestimating the cost of water leads farmers to overestimate profits The importance of the subject can be judged in light of the fact that India is the largest user of groundwater both for irrigation and for drinking purposes pumping twice as much as the United States and six times as much as Europe Despite water's vital role in ensuring economic security for the nation and farmers alike by supporting more than 70% of food production water resource economists are yet to impress upon farmers and policymakers the true value of water and the urgent need for its sustainable extraction recharge and use In an endeavor to promote more awareness the book further delineates the roles of the demand side and supply side in the economics of irrigation and explains how the cost of water varies with the efforts to recharge it crop patterns degrees of initial and premature well failure and degrees of externalities It also discusses the importance of micro irrigation in the economics of saving water for irrigation estimating the marginal productivity of water and how it improves with drip irrigation the economics of water sharing and water markets optimal control theory in sustainable extraction of water payment of ecosystem services for water and how India can effectively recover In closing the book highlights the role of socioeconomic and hydrogeological factors in the economics of irrigation which vary considerably across hard rock areas and the resulting limitations on generalizing
