Underground facilities are used extensively by many nations to conceal and protect strategic military functions and weapons stockpiles. Because of their depth and hardened status, however, many of these strategic hard and deeply buried targets could only be put at risk by conventional or nuclear earth penetrating weapons. EPW. Recently an engineering feasibility study, the robust nuclear earth penetrator program, was started by DOE and DOD to determine if a more effective EPW could be designed using major components of existing nuclear weapons. This activity has created some controversy about, among other things, the level of collateral damage that would ensue if such a weapon were used. To help clarify this issue, the Congress in P L 107-314 directed the Secretary of Defense to request from the NRC a study of the anticipated health and environmental effects of nuclear earth penetrators and other weapons and the effect of both conventional and nuclear weapons against the storage of biological and chemical weapons. This report provides the results of those analyses. Based on detailed numerical calculations, the report presents a series of findings comparing the effectiveness and expected collateral damage of nuclear EPW and surface nuclear weapons under a variety of conditions.

Hayes' Principles and Methods of Toxicology A. Wallace Hayes, Tetyana Kobets, 2023-07-03

Hayes' Principles and Methods of Toxicology has long been established as a reliable and informative reference for the concepts, methodologies, and assessments integral to toxicology. The new edition contains updated and new chapters with the addition of new authors while maintaining the same high standards that have made this book a benchmark resource in the field.

Key Features: The comprehensive yet concise coverage of various aspects of fundamental and applied toxicology makes this book a valuable resource for educators, students, and professionals. Questions provided at the end of each chapter allow readers to test their knowledge and understanding of the material covered. All chapters have been updated, and over 60 new authors have been added to reflect the dynamic nature of toxicological sciences. New topics in this edition include Safety Assessment of Cosmetics and Personal Care Products, The Importance of the Dose Rate Response, Novel Approaches and Alternative Models, Epigenetic Toxicology, and an Expanded Glossary. The volume is divided into 4 major sections addressing fundamental principles of toxicology: Section I Principles of Toxicology, major classes of established chemical hazards; Section II Agents, current methods used for the assessment of various endpoints indicative of chemical toxicity; Section III Methods, as well as toxicology of specific target systems and organs; Section IV Organ and System Specific Toxicology. This volume will be a valuable tool for the audience that wishes to broaden their understanding of hazards and mechanisms of toxicity and to stay on top of the emerging methods and concepts of the rapidly advancing field of toxicology and risk assessment.
