*The End of Progress* Edward F. Renshaw, 1976      **The No-growth Imperative** Gabor Zovanyi, 2013 More than two decades of mounting evidence confirms that the existing scale of the human enterprise has surpassed global ecological limits to growth Based on such limits The No Growth Imperative discounts current efforts to maintain growth through eco efficiency initiatives and smart growth programs and argues that growth is inherently unsustainable and that the true nature of the challenge confronting us now is one of replacing the current growth imperative with a no growth imperative Gabor Zovanyi asserts that anything less than stopping growth would merely slow today s dramatic degradation and destruction of ecosystems and their critical life support services Zovanyi makes the case that local communities must take action to stop their unsustainable demographic economic and urban increases as an essential prerequisite to the realization of sustainable states The book presents rationales and legally defensible strategies for stopping growth in local jurisdictions and portrays the viability of no growth communities by outlining their likely economic social political and physical features It will serve as a resource for those interested in shifting the focus of planning from growth accommodation to the creation of stable sustainable communities While conceding the challenges associated with transforming communities into no growth entities Zovanyi concludes by presenting evidence that suggests that prospects for realizing states of no growth are greater than might be assumed      *Hearings, Reports and Prints of the Joint Economic Committee* United States. Library, 1977      *Overshoot* William R. Catton, 1980-10-01 Our day to day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy natural resources and consumer goods Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves And for years some biologists have warned us of the direct correlation between scarcity and population growth These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology A calm but unflinching realist Catton suggests that we cannot stop this wave for we have already overshoot the Earth s capacity to support so huge a load He contradicts those scientists engineers and technocrats who continue to write optimistically about energy alternatives Catton asserts that the technological panaceas proposed by those who would harvest from the seas harness the winds and farm the deserts are ignoring the fundamental premise that the principals of ecology apply to all living things These principles tell us that within a finite system economic expansion is not irreversible and population growth cannot continue indefinitely If we disregard these facts our sagging American Dream will soon shatter completely      **Modern Age** Russell Kirk, 1981      [Routledge Revivals: Energy II \(1977\)](#) Denton Morrison, 2018-01-12 Originally published in 1977 Energy II provides a comprehensive and updated bibliography of

energy in the context of the social sciences Following on from the first bibliography published in 1975 this book offers a fully updated bibliography and argues that energy problems are best seen in the context of social phenomena such as social attitudes social behaviours social institutions and structures and populations The book provides a unique list of references that examine energy problems outside of the context of social factors
