The Atacama Large Millimeter Array:

The Atacama Large Millimeter Array National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on Physics and Astronomy, Committee on Astronomy and Astrophysics, Committee to Review the Science Requirements for the Atacama Large Millimeter Array, 2005-10-27 The 1991 NRC decadal survey for astronomy and astrophysics included a project called the Millimeter Array MMA This instrument would be an array of millimeter wavelength telescopes intended to capture images of star forming regions and distant star burst galaxies With the addition of contributions from Europe the MMA evolved into the Atacama Large Millimeter Array ALMA a proposed array of 64 12 meter antennas The project is now part of the NSF Major Research Equipment and Facilities budget request Increased costs however have forced the NSF to reconsider the number of antennas To help with that review NSF asked the NRC to assess the scientific consequences of reducing the number of active antennas from 60 to either 50 or 40 This report presents an assessment of the effect of downsizing on technical performance specifications performance degradation and the ability to perform transformational science and of the minimum number of antennas needed **Science with the Atacama Large**

Millimeter Array: Rafael Bachiller, José Cernicharo Quintanilla, 2008-04-03 Currently under construction in the Andean Altiplano Northern Chile the Atacama Large Millimeter Array ALMA is the most ambitious astronomy facility under construction ALMA is a radio interferometer composed of 54 antennas of 12 m diameter and twelve 7 m antennas with about 6600 square meters of total collecting area Initially covering the most interesting spectral wavelength ranges from 3 to 0.3 mm ALMA will be a revolutionary telescope aimed to unveil the details of star and planet formation and to provide astronomy with the first exhaustive view of the dark and youngest objects of the Universe This book describes the enormous capabilities of ALMA the state of the project and most notably the scientific prospects with such a unique facility The book includes comprehensive reviews and recent results on most hot topics of modern Astronomy the formation and evolution of galaxies the physics and chemistry of the interstellar medium and the processes of star and planet formation with prospects to the revolutionary results to be obtained with ALMA These topics discussed with special emphasis on millimeter and sub millimeter astronomy are presented by some of the most world wide reputed scientists in their fields **The sun seen with**

Oswalt,2012-12-06 The motivation for these volumes is to provide a vision for the future of small telescopes While this is an admirable task ultimately I believe that as happens all the time in science the prognostications will be overtaken by a rapidly changing scientific reality As Virginia Trimble points out in chapter 1 the kinds of big questions that face us as astronomers today are rather different than the

ones that drove the construction of astronomical facilities through much of the twentieth century Right now it appears that small telescopes will not have a lot of influence in answering those questions though they will of course contribute enormously to the many issues discussed throughout the three volumes We are on the verge of opening a whole new parameter space that may revolutionize the way we think of small telescopes and their role in astronomy the domain of the rapidly variable sky While the LSST is the most prominent example it is a long way in the future Nemiroff Rafert chapter 2 consider the value of monitoring large parts of the sky on a continuous basis using technology similar to a webcam They have installed their CONCAM2 at four locations including Kitt Peak A related project built and operated by the Harvard graduate student Gaspar Bakos HAT-1 Hungarian Automated Telescope also is in operation at Kitt Peak Visions of the Cosmos Carolyn Collins Petersen, John C.
