Geoinformatics and Atmospheric Science Tomasz Niedzielski, Krzysztof Migala, 2017-09-09 This volume presents recent developments in atmospheric sciences driven by numerical modeling which makes use of geospatial technologies and increasing computational power It gathers examples of how geoinformatics supports meteorological climatological and water related studies One of the most important features of geospatial technologies is that they provide methods and tools which may be utilized in real time or near real time in order to monitor and predict atmospheric processes This is particularly crucial in areas where dynamics of atmospheric phenomena is considerable and causes difficulties in accurate forecasting One of such areas is the transitional zone between oceanic and continental features of the mid latitude climate Good examples of investigations into the transitional zone come from Poland and its neighboring countries The topical volume provides the reader with a selection of papers on physically based and data based modelling of weather related phenomena over Poland This main theme of the topical volume is extended to cover case studies on the use of geoinformatics in atmospheric studies in other regions at a range of spatial scales

Probability, Statistics, And Decision Making In The Atmospheric Sciences Allan Murphy,Richard W.

Katz,2019-07-11 Methodology drawn from the fields of probability statistics and decision making plays an increasingly important role in the atmospheric sciences both in basic and applied research and in experimental and operational studies Applications of such methodology can be found in almost every facet of the discipline from the most theoretical and global e g atmospheric predictability global climate modeling to the most practical and local e g crop weather modeling forecast evaluation Almost every issue of the multitude of journals published by the atmospheric sciences community now contain some or more papers involving applications of concepts and or methodology from the fields of probability and statistics Despite the increasingly pervasive nature of such applications very few book length treatments of probabilistic and statistical topics of particular interest to atmospheric scientists have appeared especially in English since the publication of the

pioneering works of Brooks and Carruthers Handbook of Statistical Methods in Meteorology in 1953 and Panofsky and Brier some Applications of statistics to Meteorology in 1958 As a result many relatively recent developments in probability and statistics are not well known to atmospheric scientists and recent work in active areas of meteorological research involving significant applications of probabilistic and statistical methods are not familiar to the meteorological community as a whole **Parallel Supercomputing In Atmospheric Science - Proceedings Of The Fifth Ecmwf Workshop On The Use Of Parallel Processors In Meteorology** Geerd-r Hoffmann,T Kauranne,1993-07-15 Weather forecasting and climatology have traditionally been users of the world s fastest supercomputers The recent emergence of massively parallel supercomputers as likely successors to current vector supercomputers has created an acute need to convert weather and climate models to suit parallel supercomputers with thousands of processors Several major efforts are underway worldwide to accomplish this ECMWF has established itself as the central venue for bringing together operational weather forecasters climate researchers and parallel computer manufacturers to share their experience on these efforts every second year The recent dramatic developments in supercomputer manufacturing have made the 1992 ECMWF Workshop timelier than before National Research Council.
