Joint Modeling of Longitudinal and Time-to-Event Data Robert Elashoff, Gang li, Ning Li, 2016-10-04  
 Longitudinal studies often incur several problems that challenge standard statistical methods for data analysis  
 These problems include non ignorable missing data in longitudinal measurements of one or more response variables informative observation times of longitudinal data and survival analysis with intermittently measured time dependent covariates that are subject to measurement error and or substantial biological variation  
 Joint modeling of longitudinal and time to event data has emerged as a novel approach to handle these issues  
 Joint Modeling of Longitudinal and Time to Event Data provides a systematic introduction and review of state of the art statistical methodology in this active research field  
 The methods are illustrated by real data examples from a wide range of clinical research topics  
 A collection of data sets and software for practical implementation of the joint modeling methodologies are available through the book website  
 This book serves as a reference book for scientific investigators who need to analyze longitudinal and or survival data as well as researchers developing methodology in this field  
 It may also be used as a textbook for a graduate level course in biostatistics or statistics
