The Economics Of Environmental Degradation Tragedy For The Commons:

The Economics of Environmental Degradation Timothy M. Swanson, 1996 This text provides an institutional economics approach to analyzing the underlying causes of continuing environmental degradation poverty population poor policies and trade A survey of recent literature is followed by a consideration of whether there is a deeper explanation

The Economics of Environmental Degradation Timothy M. Swanson, 1996 The Economics of Environmental Degradation provides an institutional economics approach to analyse the underlying causes of continuing environmental degradation poverty population poor policies and trade After a critical up to date survey of the most recent literature the authors consider whether there is some common or deeper explanation of environmental degradation They conclude that a problem results whenever human exploitation of the environment outruns the capacity of human institutions to adapt and to evolve methods for managing exploitation Environmental degradation will persist because it is the static result of the ongoing dynamic contest between opportunistic individuals and institutional adaptation The book assumes no prior knowledge of economics or the environment and will appeal to a wide readership of policymakers and students with a background in economics geography conservation biology environmental studies and development studies

The Economics of Environmental Degradation Todor Panaiotov, 1990 **The Commons: Its Tragedies and Other Follies** Tibor R. Machan, 2001 **The Moral Ecology of Markets** Daniel Finn, 2006-01-16 This book provides a framework for understanding disagreements about the morality of markets

trends and challenges within the United States while Volume Two illuminates environmental issues and choices around the world. Issues covered in both volumes include vital topics such as climate change, air and water pollution, natural resource and species protection, and agricultural industrial impacts on the environment and public health. For all topics, the authors, scholars and experts hailing from a wide range of environmental and policy fields, detail a range of political, social and economic options for the future and explain why the issue in question is important for society and people as well as the natural world.

Science, Technology and Society Wenceslao J. González, 2005. The emphasis on the realm of Science, Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past. It is a social turn which affects philosophy of science as well as philosophy of technology. It includes a new vision of the aims, processes and results of scientific activities and technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant. This turn highlights science and technology as social undertakings rather than intellectual contents. According to this new vision, there are several important changes as to what should be studied, the objects of research, how it should be studied, the method and what the consequences for those studies are. The new focus of attention can be seen in many changes, and among them are several of special interest:

- a) from what science and technology are in themselves, mainly epistemic contents, to how science and technology are made, largely social constructions;
- b) from the language and structure of basic science to the characteristics of applied science and the applications of science;
- c) from technology as a feature through which human beings control their natural surroundings, a step beyond technics, due to the contribution of science to technology as a social practice and an instrument of power; and
- d) from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values: cultural, political, economic of science and technology.

Wenceslao J. González is professor of logic and philosophy of science at the University of Almería, Spain. He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University. He has been a visiting researcher at the Universities of St Andrews, Münster and London, London School of Economics, as well as Visiting fellow at the Center for Philosophy of Science, University of Pittsburgh. He has given lectures at the Universities of Pittsburgh, Stanford, Quebec and Helsinki. The conferences in which he has participated include those organized by the Universities of Uppsala, New South Wales, Bologna and Canterbury, New Zealand. He has edited 20 volumes and published 70 papers. He is the editor of the monographic issues on Philosophy and Methodology of Economics (1998) and Lakatos's Philosophy Today (2001). His writings include *Economic Prediction and Human Activity: An Analysis of Prediction in Economics from Action Theory* (1994), *On the Theoretical Basis of Prediction in Economics* (1996), *Rationality in Economics and Scientific Predictions: A Critical Reconstruction of Bounded Rationality and its Role in Economic Predictions* (1997), *Lakatos's Approach on Prediction and Novel Facts* (2001), *Rationality in Experimental Economics: An Analysis of R. A New Education for a New Economy: From Human Capital to Human Flourishing Tal Gilead, 2024-06-03 Providing an in depth novel analysis of education's role in today's economy by scrutinizing its theoretical underpinnings this volume critiques the suitability of the current dominant economic framework for education and for shaping educational policymaking worldwide Critically examining the history and philosophy that underpin our present societal understanding of the link between economics and education the book argues for an urgent redefining of education's role in the economy based on intellectual foundations that significantly differ from our current dominant conceptions Across seven chapters the book posits that the adoption of a new philosophical framework the reshaping of economic and educational aims and the adjustment of our educational system are each necessary to better promote human flourishing Ultimately providing a platform to entirely reconsider the idea that the primary aim of education is to serve the economic system in particular economic growth this book will appeal to scholars researchers and postgraduate students studying educational policy the philosophy of education and the history of education more broadly Education policymakers and academics studying education and the economy may also find this book of interest

Economics of the Environment Horst Siebert, 2013-03-09 The labor of nature is paid not because she does little In proportion as she becomes niggardly in her gifts she exacts a greater price for her work Where she is munificently beneficent she always works gratis David Ricardo This book interprets nature and the environment as a scarce resource Whereas in the past people lived in a paradise of environmental superabundance at present environmental goods and services are no longer in ample supply The environment fulfills many functions for the economy it serves as a public consumption good as a provider of natural resources and as receptacle of wastes These different functions compete with each other Releasing more pollutants into the environment reduces environmental quality and a better environmental quality implies that the environment's use as a receptacle of wastes has to be restrained Consequently environmental disruption and environmental use are by nature allocation problems This is the basic message of this book If a resource is scarce and if a zero price is charged for its use then misallocation will result The environment as a receptacle of wastes is heavily over used and consequently environmental quality declines Scarcity requires a price This book analyzes how this price should be set whether a correct price can be established through the market mechanism and what role the government should play The book offers a theoretical study of the allocation problem and describes different policy approaches to the

environmental problem *An Introduction to Environment, Society and Sustainability* Helen Hazen, Paul Sutton, 2024-10-07

This timely and innovative book delves into the complex interplay of human activities and natural limits in generating today's sustainability challenges. By contrasting the pressures of growing populations with ecological footprints associated with consumption, the volume navigates the contested terrain where human societies generate environmental impacts. Adorned with illustrative figures, examples, and case studies throughout, this book presents insightful analysis of ecological, economic, technological, and social justice responses to the challenges faced by human civilization, including land degradation, climate change, pollution, and overexploitation of natural resources. Many of these issues are wicked problems characterized by incomplete information, multiple stakeholders, and contested approaches to addressing them. In simple terms, sustainability issues are an interplay between population growth and rising consumption, which are placing impossible demands on finite resources. Potential solutions to the crisis are split between green growth approaches that emphasize technology and institutional capacity to guide economic growth in more sustainable ways, and degrowth approaches that call for a fundamental rethinking of the way we structure society and generate value. This book emerged from a student seminar where undergraduate and graduate students highlighted sustainability topics of concern, helped consider their framing, and then assisted with co-writing several of the chapters. The volume encourages readers to consider structural questions that underpin sustainability dilemmas and begins with four theoretical frameworks for understanding sustainability issues: ideas from the natural sciences, the population-consumption debate, economic frameworks, and ethical approaches. It then uses a systems approach to apply these theoretical ideas to complex global systems such as the atmosphere, oceans, and agriculture. This volume will be of pivotal interest to students, scholars, and academics in the fields of environmental studies, environment and society, human geography, and environmental geography, as well as those with an interest in these areas more generally.
