Miller, 2017-05-16 The essential lifesaver for students who want to master probability For students learning probability its numerous applications techniques and methods can seem intimidating and overwhelming That's where The Probability Lifesaver steps in Designed to serve as a complete stand alone introduction to the subject or as a supplement for a course

this accessible and user friendly study guide helps students comfortably navigate probability's terrain and achieve positive results. The Probability Lifesaver is based on a successful course that Steven Miller has taught at Brown University, Mount Holyoke College, and Williams College. With a relaxed and informal style, Miller presents the math with thorough reviews of prerequisite materials, worked-out problems of varying difficulty, and proofs. He explores a topic first to build intuition and only after that does he dive into technical details. Coverage of topics is comprehensive, and materials are repeated for reinforcement both in the guide and on the book's website. An appendix goes over proof techniques, and video lectures of the course are available online. Students using this book should have some familiarity with algebra and precalculus. The Probability Lifesaver not only enables students to survive probability but also to achieve mastery of the subject for use in future courses. A helpful introduction to probability or a perfect supplement for a course. Numerous worked-out examples. Lectures based on the chapters are available free online. Intuition of problems emphasized first, then technical proofs given. Appendixes review proof techniques. Relaxed conversational approach.

Written in a straightforward, nontechnical style that maintains depth and accuracy, this book is the first complete text applicable to interior design courses and provides thorough preparation for the NCIDQ exam. Engaging, clear illustrations support the text, which is accessible to those without a math or physics background. Topics covered include Heating and air conditioning systems, Environmental issues, Water and waste, Thermal comfort, HVAC systems, Electricity, Lighting, Security and communications systems, Fire safety, Transportation systems.
