    Singularity Theory and Some Problems of Functional Analysis ,1992   **Singularity Theory and Some Problems of Functional Analysis** Semen Grigor'evich Gindikin,1992 The emergence of singularity theory marks the return of mathematics to the study of the simplest analytical objects functions graphs curves surfaces The modern singularity theory for smooth mappings which is currently undergoing intensive developments can be thought of as a crossroad where the most abstract topics such as algebraic and differential geometry and topology complex analysis invariant theory and Lie group theory meet the most applied topics such as dynamical systems mathematical physics geometrical optics mathematical economics and control theory The papers in this volume include reviews of established areas as well as presentations of recent results in singularity theory The authors have paid special attention to examples and discussion of results rather than burying the ideas in formalism notation and technical details The aim is to introduce all mathematicians as well as physicists engineers and other consumers of singularity theory to the world of ideas and methods in this burgeoning area   *The Interplay between Differential Geometry and Differential Equations* Valentin Vasil'evich Lychagin,1995   <u>Nonlinear Evolution Equations</u> Nina Nikolaevna Uraltseva,1995-05-19 This collection focuses on nonlinear problems in partial differential equations Most of the papers are based on lectures presented at the seminar on partial differential equations and mathematical physics at St Petersburg University Among the topics explored are the existence and properties of solutions of various classes of nonlinear evolution equations nonlinear imbedding theorems bifurcations of solutions and equations of mathematical physics Navier Stokes type equations and the nonlinear Schrodinger equation The book will be useful to researchers and graduate students working in partial differential equations and mathematical physics   *Proceedings of the St. Petersburg Mathematical Society Volume III* Ol'ga Aleksandrovna Ladyzhenskai︠a︡,1995 Books in this series highlight some of the most interesting works presented at symposia sponsored by the St Petersburg Mathematical Society Aimed at researchers in number theory field theory and algebraic geometry the present volume deals primarily with aspects of the theory of higher local fields and other types of complete discretely valued fields Most of the papers require background in local class field theory and algebraic K theory however two of them Unit Fractions and Collections of Multiple Sums would be accessible to undergraduates   **Proceedings of the St. Petersburg Mathematical Society, Volume VIII** N.N. Uraltseva,2002-04-02 The articles in this collection present new results in partial differential equations numerical analysis probability theory and geometry The results ideas and methods given in the book will be of interest to a broad range of specialists   **Topics in Statistical and Theoretical Physics** R. L. Dobrushin,1996   **Dynamical Systems in Classical Mechanics** Valeriĭ Viktorovich Kozlov,1995 This book shows that the phenomenon of integrability is related not only to Hamiltonian systems but also to a wider variety of systems having invariant measures that often arise in nonholonomic mechanics Each paper presents unique ideas and original approaches to various mathematical problems related to

integrability stability and chaos in classical dynamics Topics include the inverse Lyapunov theorem on stability of equilibria geometrical aspects of Hamiltonian mechanics from a hydrodynamic perspective current unsolved problems in the dynamical systems approach to classical mechanics   Topics in Topology and Mathematical Physics Sergeĭ Petrovich Novikov,1995

O'Malley,Alexei Pokrovskii,Vladimir Sobolev,2005-06-01 This book unifies many important recent developments in the analysis of singular perturbation and hysteresis phenomena in an accessible and comprehensive fashion In April 2002 at University College Cork in Ireland the editors conducted a workshop to provide a forum for experts to share their interests and knowledge For this book the editors have compiled research from those practitioners in areas such as reacting systems semiconductor lasers shock phenomena in economic modeling and fluid mechanics all with an emphasis on hysteresis and singular perturbations A basic introduction to hysteresis and singular perturbation theory is included with simple examples from both physics and mathematics Later chapters address applications of hysteresis to economics various aspects of the asymptotic theory of singularly perturbed systems typical problems of the asymptotic theory of contrast structures and the geometrical approach to an investigation of models with singular perturbations and hysteresis   Complements of Discriminants of Smooth Maps V. Gorban,Nikolas Kazantzis,I. G. Kevrekidis,Hans Christian Öttinger,Konstantinos Theodoropoulos,2006-09-22 Model reduction and coarse graining are important in many areas of science and engineering How does a system with many degrees of freedom become one with fewer How can a reversible micro description be adapted to the dissipative macroscopic model These crucial questions as well as many other related problems are discussed in this book All contributions are by experts whose specialities span a wide range of fields within science and engineering **Genericity In Polynomial Optimization** Tien Son Pham,Ha Huy Vui,2016-12-22 In full generality minimizing a polynomial function over a closed semi algebraic set requires complex mathematical equations This book explains recent developments from singularity theory and semi algebraic geometry for studying polynomial optimization problems Classes of generic problems are defined in a simple and elegant manner by using only the two basic and relatively simple notions of Newton polyhedron and non degeneracy conditions associated with a given polynomial optimization problem These conditions are well known in singularity theory however they are rarely considered within the optimization community Explanations focus on critical points and tangencies of polynomial optimization H lderian error bounds for polynomial systems Frank Wolfe type theorem for polynomial programs and well posedness in polynomial optimization It then goes on to look at optimization for the different types of polynomials Through this text graduate students PhD students and researchers of mathematics will be provided with the knowledge necessary to use semi algebraic geometry in optimization **Droplets and Sprays: Simple Models of Complex Processes** Sergei S. Sazhin,2022-06-28 This book acts as a guide to simple models that describe some of the complex fluid dynamics heat mass transfer and combustion processes in droplets and sprays Attention is focused mainly on the use of classical hydrodynamics and a combination of kinetic and hydrodynamic models to analyse the heating and evaporation of mono and multi component droplets The models were developed for cases when small and large numbers of components are present in droplets Some of these models are used for the prediction of time to puffing micro explosion of composite water fuel droplets processes that are widely used in combustion devices to stimulate disintegration of relatively large droplets into smaller ones The

predictions of numerical codes based on these models are validated against experimental results where possible In most of the models droplets are assumed to be spherical some preliminary results of the generalisation of these models to the case of non spherical droplets approximating them as spheroids are presented
