Analysis of Global Change Assessments
National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Analysis of Global Change Assessments, 2007-09-07 Global change assessments inform decision makers about the scientific underpinnings of a range of environmental issues such as climate change stratospheric ozone depletion and loss of biodiversity Dozens of assessments have been conducted to date by various U S and international groups many of them influencing public policies technology development and research directions This report analyzes strengths and weaknesses of eight past assessments to inform future efforts Common elements of effective assessments include strong leadership extensive engagement with interested and affected parties a transparent science policy interface and well defined communication strategies The report identifies 11 essential elements of effective assessments and recommends that future assessments include decision support tools that make use of information at the regional and local level where decisions are made American Book Publishing Record ,2006 Resources in Education ,1999-10

Handbook of Climate Change Communication: Vol. 1 Walter Leal Filho, Evangelos Manolas, Anabela Marisa Azul, Ulisses M. Azeiteiro, Henry McGhie, 2017-12-29 This comprehensive handbook provides a unique overview of the theory methodologies and best practices in climate change communication from around the world It fosters the exchange of information ideas and experience gained in the execution of successful projects and initiatives and discusses novel methodological approaches aimed at promoting a better understanding of climate change adaptation Addressing a gap in the literature on climate change communication and pursuing an integrated approach the handbook documents and disseminates the wealth of experience currently available in this field Volume 1 of the handbook provides a unique description of the theoretical basis and of some of the key facts and phenomena which help in achieving a better understanding of the basis of climate change communication providing an essential basis for successful initiatives in this complex field *Cut Super Climate Pollutants Now!* Alan Miller, Durwood Zaelke, Stephen O. Andersen, 2021-04-14 Lays out an absolutely essential part of initial climate

action in the US and other countries Climate policymakers need to read this book now James Gustave Speth former chair US Council on Environmental Quality We have a decade or less to radically slow global warming before we risk hitting irreversible tipping points that will lock in catastrophic climate change The good news is that we know how to slow global warming enough to avert disaster Cut Super Climate Pollutants Now explains how a 10 year sprint to cut short lived super climate pollutants primarily HFC refrigerants black carbon soot and methane can cut the rate of global warming in half so we can stay in the race to net zero climate emissions by 2050 *U.S. Climate Change Technology Program* Climate Change Technology Program (U.S.),2006 Research to Protect, Restore, and Manage the Environment National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on Environmental Research,1993-02-01 This book assesses the strengths and weaknesses of current environmental research programs describes the desirable characteristics of an effective program and recommends cultural and organizational changes to improve the performance of environmental research Research areas in need of greater emphasis are identified and overall directions for environmental research are recommended The book also comments on the proposal to establish a National Institute for the Environment and on the elevation of the Environmental Protection Agency to cabinet status *Capitalism Reconnected* Jan Peter Balkenende,Govert Buijs,2025-10-01 Capitalism has gone astray Today we face ecological exhaustion persistent inequality financialization stress on communities short termism and new power concentrations An avalanche of new economic thinking and a reorientation of European values show the way toward a different economy A new perspective is necessary if we want to implement the Sustainable Development Goals and if we consider our planet as Our Common Home for present and future generations This book argues that European economies should be the initiators of a global transition toward a sustainable and inclusive world economy Together amid severe geopolitical and geoeconomic challenges they need to develop their own perspective on what a good economy really is in distinction to Chinese state capitalism and American big business capitalism Crucially this requires the rediscovery of key European values a coherent view on responsible capitalism and a new self awareness as a global player for the Common Good in today s and tomorrow s world **Law and Ecology** Richard O. Brooks,Ross Jones,2017-07-05 In 1970 Earth Day was first celebrated marking the dawn of worldwide environmental consciousness and the passing of many environmental laws In part these events were the result of the maturing of the science of ecology which recognized the interdependence of the web and cycles of nature This volume explores the relationship between ecology and environmental law beginning with a description of the two very different disciplines This description is followed by a history of their episodic interactions the early period of origin the mid century formative period from 1950 to 1970 the initial serious period of interaction after Earth Day in 1970 and the testing of the relationship during the next two decades Utilizing a number of case studies examinations of the key linkage persons legal instruments and the migration of ecological concepts and frameworks this book analyzes the final flowering of an ecosystem regime which

embraces the connections between the two disciplines of ecology and environmental law Concluding with an inventory of the problems posed by the relationship between the two disciplines and an agenda for future research this clearly structured comprehensive and stringent book is an essential resource for all serious scholars and students of ecology and environmental law Limiting the Magnitude of Future Climate Change National Research Council, Division on Earth and Life

Studies, Board on Atmospheric Sciences and Climate, America's Climate Choices: Panel on Limiting the Magnitude of Climate Change, 2011-01-06 Climate change driven by the increasing concentration of greenhouse gases in the atmosphere poses serious wide ranging threats to human societies and natural ecosystems around the world The largest overall source of greenhouse gas emissions is the burning of fossil fuels The global atmospheric concentration of carbon dioxide the dominant greenhouse gas of concern is increasing by roughly two parts per million per year and the United States is currently the second largest contributor to global emissions behind China Limiting the Magnitude of Future Climate Change part of the congressionally requested America's Climate Choices suite of studies focuses on the role of the United States in the global effort to reduce greenhouse gas emissions The book concludes that in order to ensure that all levels of government the private sector and millions of households and individuals are contributing to shared national goals the United States should establish a budget that sets a limit on total domestic greenhouse emissions from 2010 to 2050 Meeting such a budget would require a major departure from business as usual in the way the nation produces and uses energy and that the nation act now to aggressively deploy all available energy efficiencies and less carbon intensive technologies and to develop new ones With no financial incentives or regulatory pressure the nation will continue to rely upon and lock in carbon intensive technologies and systems unless a carbon pricing system is established either cap and trade a system of taxing emissions or a combination of the two Complementary policies are also needed to accelerate progress in key areas developing more efficient less carbon intense energy sources in electricity and transportation advancing full scale development of new generation nuclear power carbon capture and storage systems and amending emissions intensive energy infrastructure Research and development of new technologies that could help reduce emissions more cost effectively than current options is also strongly recommended

EPA Publications Bibliography Quarterly Abstract Bulletin United States. Environmental Protection Agency, 1995-10 *Environmental Commodities Markets and Emissions Trading* Blas Luis Pérez Henríquez, 2013 Market based solutions to environmental problems offer great promise but require complex public policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis Pérez Henríquez analyzes past market based environmental programs to extract lessons for the future of

ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California s ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious P rez Henr quez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

Keeping Pace with Science and Engineering National Academy of Engineering,1993-02-01 The technical basis of environmental regulation is always at the edge of scientific and engineering understanding As knowledge improves questions will inevitably arise about past decisions Understanding how the regulatory system accommodates changing scientific and engineering knowledge is vital for achieving environmental values In this new volume seven case studies shed light on the interplay between environmental regulation and scientific and engineering understanding with practical conclusions on how science and engineering should be used for more sound and timely regulatory decision making The book provides helpful timelines of scientific and regulatory developments for the cases which include Factors impeding clean up strategies in the Chesapeake Bay Pivotal questions in the regulation of ambient ozone concentrations How science has been heeded but also ignored in regulation of new municipal waste combustors Impact of scientific findings on control of chlorination by products Acid rain and what can be learned about research and public policy debate Controversy over the need for formaldehyde regulation The effect of public perception on management decisions concerning dioxin This volume will be of practical interest to policymakers business and environmental advocates scientists engineers researchers attorneys faculty and students

Teaching Climate Change in the Humanities Stephen Siperstein,Shane Hall,Stephanie LeMenager,2016-10-04 Climate change is an enormous and increasingly urgent issue This important book highlights how humanities disciplines can mobilize the creative and critical power of students teachers and communities to confront climate change The book is divided into four clear sections to help readers integrate climate change into the classes and topics they are already teaching as well as engage with interdisciplinary methods and techniques Teaching Climate Change in the Humanities constitutes a map and toolkit for anyone who wishes to draw upon the strengths of literary and cultural studies to teach valuable lessons that engage with climate change

Unnatural Law David R. Boyd,2011-11-01 While governments assert that Canada is a world leader in sustainability Unnatural Law provides extensive evidence to refute this claim A comprehensive assessment of the strengths and weaknesses of Canadian environmental law the book provides a balanced critical examination of Canada s record focusing on laws and policies intended to protect water air land and biodiversity Three decades of environmental laws have produced progress in a number of important areas such

as ozone depletion protected areas and some kinds of air and water pollution However Canada's overall record remains poor In this vital and timely study David Boyd explores the reasons why some laws and policies foster progress while others fail He ultimately concludes that the root cause of environmental degradation in industrialized nations is excessive consumption of resources Unnatural Law outlines the innovative changes in laws and policies that Canada must implement in order to respond to the ecological imperative of living within the Earth's limits The struggle for a sustainable future is one of the most daunting challenges facing humanity in the 21st century Everyone academics lawyers students policy makers and concerned citizens interested in the health of the Canadian and global environments will find Unnatural Law an invaluable source of information and insight For more information on Unnatural Law visit David Boyd's site www.unnaturallaw.com

The Skeptical Environmentalist Bjørn Lomborg, 2001-08-30 The Skeptical Environmentalist challenges widely held beliefs that the environmental situation is getting worse and worse The author himself a former member of Greenpeace is critical of the way in which many environmental organisations make selective and misleading use of the scientific evidence Using the best available statistical information from internationally recognised research institutes Bjørn Lomborg systematically examines a range of major environmental problems that feature prominently in headline news across the world His arguments are presented in non technical accessible language and are carefully backed up by over 2500 footnotes allowing readers to check sources for themselves Concluding that there are more reasons for optimism than pessimism Bjørn Lomborg stresses the need for clear headed prioritisation of resources to tackle real not imagined problems The Skeptical Environmentalist offers readers a non partisan stocktaking exercise that serves as a useful corrective to the more alarmist accounts favoured by campaign groups and the media
