The Modern Moon A Personal View:

The Modern Moon Charles A. Wood, 2003 Drawing on both telescopic and spacecraft observations of the Moon The Modern Moon A Personal View is the authoritative guidebook that tells readers which features to look for and why to look Set up your telescope and let Wood unravel the Moon s complex past as you gaze at lunar vistas

The Moon Bill Leatherbarrow, 2018-05-15 The moon has always been the most obvious feature in our night sky It is our nearest celestial neighbour orbiting the earth at an average distance of 384 400 kilometers and is large enough to display significant detail even to the unaided eye Our moon has drawn observers since the dawn of humankind and all people have tried to make sense of the puzzles it poses and the questions it raises The moon provided our ancient ancestors with one of the earliest means of keeping and measuring time and many early religions had cults that worshipped it When it eclipses the sun it provides one of the most awe inspiring views in nature In The Moon celebrated amateur astronomer Bill Leatherbarrow provides expert insight into the history of our study of this compelling astronomical body Drawing on his own decades of lunar observation he describes how and why the observation and study of the moon has evolved particularly in the age of telescopic study He also offers an overview of current scientific thinking and developments in lunar science since the advent of the Space Age even providing practical advice on how to make your own observations of the moon Extensively illustrated with images of the lunar surface taken both from spacecraft and using amateur equipment this book is an accessible introduction to complex astrophysical concepts that will give all amateur astronomers and anyone fascinated by this natural satellite something to moon over

The Cambridge Photographic Moon Atlas Alan Chu, Wolfgang Paech, Mario Weigand, 2012-09-28 Featuring 388 high resolution photographs and concise descriptions of the Moon s topography this atlas is an indispensable guide for amateur astronomers and astrophotographers

Faces of the Moon Bob Crelin, 2009-07-01 Describes the moon s phases as it orbits the Earth every twenty nine days using rhyming text and cut outs that illustrate each phase

The Value of the Moon Paul D. Spudis, 2016-04-26 While the Moon was once thought to hold the key to space exploration in recent decades the U S has largely turned its sights toward Mars and other celestial bodies instead In The Value of the Moon lunar scientist Paul Spudis argues that the U S can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy Spudis explores three reasons for returning to the Moon it is close it is interesting and it is useful The proximity of the Moon not only allows for frequent launches but also control of any machinery we place there It is interesting because recorded deep on its surface and in its craters is the preserved history of the moon the sun and indeed the entire galaxy And finally the moon is useful because it is rich with materials and energy The moon Spudis argues is a logical base for further space exploration and even a possible future home for us all Throughout his work Spudis incorporates details about man s fascination with the moon and its place in our shared history He also explores its religious cultural and scientific resonance and assesses its role in the future of spaceflight and

our national security and prosperity Who's Who In The Moon Brian Jones, 2024-12-30 Who's Who in the Moon is aimed not only at the beginner or near beginner but also at the backyard astronomer who is perhaps experienced in other areas of observation but who has decided to spend more time considering the Moon as an alternative target The book provides a visual introduction to our closest celestial neighbor opening with an introductory section which details both with the history of lunar mapping and naming of lunar formations as well as providing useful information on observing the lunar surface and what observers can realistically expect to see when they look at the Moon with the naked eye binoculars or a small medium telescope The introductory section is followed by a lengthy series of images including not only wide field panoramic views but also a large number of more detailed images showing close up views of different areas of the Moon and featuring individual craters mountains valleys and much more Many of the individual features shown on these images are identified by name and are accompanied by biographical sketches relating to the men and women after whom they are named This is a non technical up close and personal visual look at the Earth's only natural satellite and many of the individual features scattered across its surface Rather than offering itself as a full and exhaustive guide to the lunar surface A Guide to the Moon is more of a vade mecum which enables and hopefully encourages the reader to become more acquainted with the lunar landscape on a personal level with a view to learning more about the astronomers and other scientists whose names are immortalised by having lunar features named after them Who's Who in the Moon was inspired by and is a tribute to a Memoir published by the British Astronomical Association BAA in 1938 entitled Who's Who in the Moon written by Mary Evershed the first Director of the BAA Historical Section The biographical notes in A Guide to the Moon include examples of those penned by Mary Evershed in her original publication **Observing the Moon** Gerald North, 2007-07-05 Written by an experienced and well known lunar observer this is a hands on primer for the aspiring observer of the Moon Whether you are a novice or are already experienced in practical astronomy you will find plenty in this book to help you raise your game to the next level and beyond In this thoroughly updated second edition the author provides extensive practical advice and sophisticated background knowledge of the Moon and of lunar observation It incorporates the latest developments in lunar imaging techniques including digital photography CCD imaging and webcam observing and essential advice on collimating all common types of telescope Learn what scientists have discovered about our Moon and what mysteries remain still to be solved Find out how you can take part in the efforts to solve these mysteries as well as enjoying the Moon's spectacular magnificence for yourself **Sketching the Moon** Richard Handy, Deirdre Kelleghan, Thomas McCague, Erika Rix, Sally Russell, 2011-12-11 For anyone artistically inclined observing the Moon and attempting to sketch or paint it can easily become a passion The Moon presents a broad array of tone texture and form Capturing this in a painting or sketch at the eyepiece of a telescope or even with binoculars develops observational skills leaves a record of the observation and can also be a delightful and rewarding pastime However the choice of media available is extensive acrylic paint oils pen charcoal etc

and even computer art programs and there is no existing text that fully explains all lunar sketching and painting techniques in each respective medium This beautiful and graphically rich book fulfills this requirement It presents detailed step by step instructions in the form of illustrated tutorials for every major medium employed to represent the Moon It also provides practical advice on how to sketch outdoors at night not ideal conditions for an artist This is easily the most extensive book on the subject of lunar art for amateur astronomers particularly those observing through a telescope The diverse features of the lunar surface will attract and entice readers to review the number of different media presented exciting and inspiring them with the possibilities of learning to depict all of the fascinating aspects of Earth s very own satellite
