The Mirage of Safety Beatrice Trum Hunter,1975 Decries the proliferation of harmful unnecessary chemicals in American foods and evaluates current government policies and regulations *The Mirage of Safety* Beatrice Trum Hunter,1975

Decries the proliferation of harmful unnecessary chemicals in American foods and evaluates current government policies and regulations *An Alternative History of Hyperactivity* Matthew Smith,2011-07-01 In 1973 San Francisco allergist Ben

Feingold created an uproar by claiming that synthetic food additives triggered hyperactivity then the most commonly diagnosed childhood disorder in the United States He contended that the epidemic should not be treated with drugs such as Ritalin but instead with a food additive free diet Parents and the media considered his treatment the Feingold diet a compelling alternative Physicians however were skeptical and designed dozens of trials to challenge the idea The resulting medical opinion was that the diet did not work and it was rejected Matthew Smith asserts that those scientific conclusions were in fact flawed *An Alternative History of Hyperactivity* explores the origins of the Feingold diet revealing why it became so popular and the ways in which physicians parents and the public made decisions about whether it was a valid treatment for hyperactivity Arguing that the fate of Feingold s therapy depended more on cultural economic and political factors than on the scientific protocols designed to test it Smith suggests the lessons learned can help resolve medical controversies more effectively *Clearinghouse Review* ,1976 **Chemical Sciences in the Modern World** Seymour H.

Mauskopf,2016-11-11 It would be difficult to overestimate the importance of the chemical sciences to the modern world In the last 150 years they have transformed our physical environment our material culture our manner of living and even our persons and they are continuing to do so in profound ways Yet the detailed and systematic study of the history of the modern chemical sciences has been relatively late in coming This compilation of essays by leading scholars represents the first fruits of modern historical scholarship The essays vary in form and content some represent detailed original research others are cast as synoptic blueprints for future research in major domains of scholarship still others are provocative reflections on the opportunities and challenges facing historians of chemical sciences and industries and their audiences The essays in Part One deal with the experimental generation of new chemical knowledge the nature of theories about chemical knowledge and the reception of new knowledge by the chemical community Part Two is devoted primarily to the development of modern industrial chemistry Part Three is concerned with preserving archives and artifacts owned by public and private institutions with making the history of chemistry accessible to persons interested but not trained in history and with helping both policymakers and the general public to understand the policy issues involving the chemical sciences and industries through the insights provided by historical research Part Four the concluding section discusses future prospects for the history of the chemical sciences addressing questions about methodology audience and new directions for research Technical

Knowledge in American Culture Hamilton Cravens,Alan I Marcus,David M. Katzman,1996-04-30 Addresses the relationships

between what modern day experts say to each other and to their constituencies Technical Knowledge in American Culture addresses the relationships between what modern day experts say to each other and to their constituencies and whether what they say and do relates to the larger culture society and era These essays challenge the social impact model by looking at science technology and medicine not as social activities but as intellectual activities

Health For The Whole Person Arthur C. Hastings, 2019-03-13 This book presents attitudes information and tools for a holistic approach to medicine health and mental health In our discussions among ourselves and with the contributing authors we defined three aspects of a holistic approach First such an approach involves expanding our focus to include the many personal familial social and environmental factors that promote health prevent illness and encourage healing Second a holistic approach views the patient as an individual person not as a symptom bearing organism This attitude emphasizes the self responsibility of the person for his or her health and the importance of mobilizing the person's own health capacities rather than treating illness only from the outside Third the holistic approach tries to make wise use of the many diagnostic treatment and health modalities that are available in addition to the standard materia medica including alternative medical and healing systems as well as psychological techniques and physical modalities Some of these methods of treatment and health practices are already accepted others are accepted but not applied in practice and still others need further research to explore the range of their uses

Anthropology and Contemporary Human Problems John H. Bodley, 2012-04-12 We live in a time of global mega problems of unsustainable growth and consumption resource depletion ecosystem degradation global warming escalating energy costs poverty and conflict Cultural anthropologist John H Bodley trenchantly critiques these most pressing issues and shows how anthropology makes it possible to find solutions The focus on culture scale suggests that many solutions may be found by developing local communities supported by regional markets and ecosystems rather than by making the continuous accumulation of financial capital the dominant cultural process throughout the world Now in its sixth edition this classic textbook continues to have tremendous relevance and is more timely than ever in light of the recent global economic crisis It exposes readers to the problems of a world out of balance with misdirected growth by the elite Bodley offers examples from prehistoric and modern tribal societies along side of ancient imperial and contemporary commercial societies Students will find this to be the trusted source to build a world view Anthropology and Contemporary Human Problems is ideal for adoption in anthropology and sociology courses on globalization cultural ecology social class and inequality the environment sustainability and development
