Gray,2013 Cyber is now recognized as an operational domain but the theory that should explain it strategically is for the most part missing It is one thing to know how to digitize it is quite another to understand what digitization means strategically The author maintains that although the technical and tactical literature on cyber is abundant strategic theoretical treatment is poor He offers four conclusions 1 cyber power will prove useful as an enabler of joint military operations 2 cyber offense is likely to achieve some success and the harm we suffer is most unlikely to be close to lethally damaging 3 cyber power is only information and is only one way in which we collect store and transmit information and 4 it is clear enough today that the sky is not falling because of cyber peril As a constructed environment cyberspace is very much what we choose to make it Once we shed our inappropriate awe of the scientific and technological novelty and wonder of it all we ought to have little trouble realizing that as a strategic challenge we have met and succeeded against the like of
