A Risk-Management Strategy for PCB-Contaminated Sediments National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Remediation of PCB-Contaminated Sediments, 2001-06-07 This book provides a risk based framework for developing and implementing strategies to manage PCB contaminated sediments at sites around the country The framework has seven stages beginning with problem definition continuing through assessment of risks and management options and ending with an evaluation of the success of the management strategy At the center of the framework is continuous and active involvement of all affected parties particularly communities in the development implementation and evaluation of the management strategy A Risk Management Strategy for PCB Contaminated Sediments emphasizes the need to consider all risks at a contaminated site not just human health and ecological effects but also the social cultural and economic impacts Given the controversy that has arisen at many PCB contaminated sites this book provides a consistent yet flexible approach for dealing with the many issues associated with assessing and managing the risks at Superfund and other contaminated sites

Recombinant protein expression in microbial systems Eduardo A. Ceccarelli, Germán L. Rosano, 2014-10-02 With the advent of recombinant DNA technology expressing heterologous proteins in microorganisms rapidly became the method of choice for their production at laboratory and industrial scale Bacteria yeasts and other hosts can be grown to high biomass levels efficiently and inexpensively Obtaining high yields of recombinant proteins from this material was only feasible thanks to constant research on microbial genetics and physiology that led to novel strains plasmids and cultivation strategies Despite the spectacular expansion of the field there is still much room for progress Improving the levels of expression and the solubility

of a recombinant protein can be quite challenging Accumulation of the product in the cell can lead to stress responses which affect cell growth Buildup of insoluble and biologically inactive aggregates inclusion bodies lowers the yield of production This is particularly true for obtaining membrane proteins or high molecular weight and multi domain proteins Also obtaining eukaryotic proteins in a prokaryotic background for example plant or animal proteins in bacteria results in a product that lack post translational modifications often required for functionality Changing to a eukaryotic host yeasts or filamentous fungi may not be a proper solution since the pattern of sugar modifications is different than in higher eukaryotes Still many advances in the last couple of decades have provided to researchers a wide variety of strategies to maximize the production of their recombinant protein of choice Everything starts with the careful selection of the host Be it bacteria or yeast a broad list of strains is available for overcoming codon use bias incorrect disulfide bond formation protein toxicity and lack of post translational modifications Also a huge catalog of plasmids allows choosing for different fusion partners for improving solubility protein secretion chaperone co expression antibiotic resistance and promoter strength Next controlling culture conditions like temperature inducer and media composition can bolster recombinant protein production With this Research Topic we aim to provide an encyclopedic account of the existing approaches to the expression of recombinant proteins in microorganisms highlight recent discoveries and analyze the future prospects of this exciting and ever growing field

Reformulation as a Strategy for Developing Healthier Food Products Vassilios Raikos,Viren Ranawana,2019-10-09 This work introduces the concept of reformulation a relatively new strategy to develop foods with beneficial properties Food reformulation by definition is the act of re designing an existing often popular processed food product with the primary objective of making it healthier In recent years the concept of food reformulation has evolved significantly as additional benefits of re designing food have become apparent In addition to targeting specific food ingredients that are considered potentially harmful for human health food reformulation can also be effectively used as a strategy to make foods more nutritious by introducing essential macro micro nutrients or phytochemicals in the diet Reformulating foods can also improve sustainability by introducing waste and underutilized ingredients into the food chain In light of these developments reformulating existing foods is now considered a realistic and attractive opportunity to provide healthy nutritious and sustainable food choices to the consumers and likewise improve public health Indeed reformulation has now become essential in many cases for redressing the health properties of foods that are popularly consumed and significantly affecting public health This edited volume covers aspects of food reformulation from various angles exploring the role of the food industry academia and consumers in developing new products Some of the major themes contributors address include methods of reformulating food products for health improving the nutritional composition of foods and challenges to the food industry including regulation as well as consumer perception of new products The book presents several case studies to clarify these objectives and illustrate the difficulties encountered in the process of developing a reformulated product Chapters from experts in the field identify emerging and future trends in food product development

and highlight ways in which these efforts will help with increasing food security improving nutrition and health and promoting sustainable production The editors have designed the book to be useful for both industry professionals and the research community This interdisciplinary approach incorporates a wide spectrum of food sciences including composition engineering and chemistry as well as nutrition and public health Food and nutrition professionals policy makers health care and social scientists and graduate students will also find the information relevant
