Strategy Representation Andrew S. Gordon, 2004-07-16 Print version originally published Mahwah NJ L Erlbaum 2004

A Formal Theory of Commonsense Psychology Andrew S. Gordon, Jerry R. Hobbs, 2017-09-07 This book formalizes commonsense knowledge to enable artificial intelligence to understand and engage with the mental lives of people

Formal Ontology in Information Systems Antony Galton, Riichiro Mizoguchi, 2010 Ontology began life in ancient times as a fundamental part of philosophical enquiry concerned with the analysis and categorisation of what exists In recent years the subject has taken a practical turn with the advent of complex computerised information systems which are reliant on robust and coherent representations of their subject matter The systematisation and elaboration of such representations and their associated reasoning techniques constitute the modern discipline of formal ontology which is now being applied to such diverse domains as artificial intelligence computational linguistics bioinformatics GIS knowledge engineering information retrieval and the Semantic Web Researchers in all these areas are becoming increasingly aware of the need for serious engagement with ontology understood as a general theory of the types of entities and relations making up their respective domains of enquiry to provide a solid foundation for their work The conference series Formal Ontology in Information Systems FOIS provides a meeting point for researchers from these and other disciplines with an interest in formal ontology where both theoretical issues and concrete applications can be explored in a spirit of genuine interdisciplinarity This volume contains the proceedings of the sixth FOIS conference held in Toronto Canada during 11-14 May 2010 including invited talks by Francis Jeffry Pelletier John Bateman and Alan Rector and the 28 peer reviewed submissions selected for presentation at the conference ranging from foundational issues to more application oriented topics IOS Press is an international science technical and medical publisher of high quality books for academics scientists and professionals in all fields Some of the areas we publish in Biomedicine Oncology Artificial intelligence Databases and information systems Maritime engineering Nanotechnology Geoengineering All aspects of physics E governance E commerce The knowledge economy Urban studies Arms control Understanding and responding to terrorism Medical informatics Computer Sciences

Commonsense Reasoning Erik T. Mueller, 2014-11-11 To endow computers with common sense is one of the major long term goals of artificial intelligence research One approach to this problem is to formalize commonsense reasoning using mathematical logic Commonsense Reasoning An Event Calculus Based Approach is a detailed high level reference on logic based commonsense reasoning It uses the event calculus a highly powerful and usable tool for commonsense reasoning which Erik Mueller demonstrates as the most effective tool for the broadest range of applications He provides an up to date work promoting the use of the event calculus for commonsense reasoning and bringing into one place information scattered across many books and papers Mueller shares the knowledge gained in using the event calculus and extends the literature with detailed event calculus solutions that span many areas of the commonsense world The Second Edition features new chapters

on commonsense reasoning using unstructured information including the Watson system commonsense reasoning using answer set programming and techniques for acquisition of commonsense knowledge including crowdsourcing Understand techniques for automated commonsense reasoning Incorporate commonsense reasoning into software solutions Acquire a broad understanding of the field of commonsense reasoning Gain comprehensive knowledge of the human capacity for commonsense reasoning

Affective Computing and Sentiment Analysis Khurshid Ahmad, 2011-08-24 This volume maps the watershed areas between two holy grails of computer science the identification and interpretation of affect including sentiment and mood The expression of sentiment and mood involves the use of metaphors especially in emotive situations Affect computing is rooted in hermeneutics philosophy political science and sociology and is now a key area of research in computer science The 24 7 news sites and blogs facilitate the expression and shaping of opinion locally and globally Sentiment analysis based on text and data mining is being used in the looking at news and blogs for purposes as diverse as brand management film reviews financial market analysis and prediction homeland security There are systems that learn how sentiments are articulated This work draws on and informs research in fields as varied as artificial intelligence especially reasoning and machine learning corpus based information extraction linguistics and psychology

Metareasoning Michael T. Cox, Anita Raja, 2011 Experts report on the latest artificial intelligence research concerning reasoning about reasoning itself

Civilizational Identity M. Hall, P. Jackson, 2008-01-11 This volume focuses on the constitutive politics of civilizational identity examining the practices through which notions of civilizational identity are produced and reproduced in different contexts including the global credit regime modernity debates and the war on terrorism

Cognitive Systems Engineering in Health Care Ann M. Bisantz, Catherine M. Burns, Rollin J. Fairbanks, 2014-12-02 Cognitive systems engineering has been widely and successfully applied in the design of safety critical systems such as nuclear power aviation and military command and control More recently these methods are being applied to the design of health and medical systems in order to improve health care quality reduce errors and adverse events and i

The Center Holds Nadia Mizner, 2017-07-12 The United Nations remains a unique institutional hope for addressing and resolving the world's major environmental developmental and humanitarian problems It represents global aspirations for a just and peaceful world by inspiring the political imagination of individuals and collectivities But because it is now viewed primarily as a trade union for expressing the national political interests of 192 state parties as Clements and Mizner's volume of essays demonstrate the UN has succumbed to political cynicism and skepticism Only the UN can champion emerging international regimes the rule of law and global processes that generate structural stability justice and peace in the international system Unlike some central security organs of the UN specialized UN agencies have addressed these problems With the exception of the wars in Afghanistan and Iraq the UN and its affiliates have played an important role in ending violent political conflict and in preventing further conflict According to the Human Security Report 2005 the 80 percent

decline in deadly conflicts since the early 1990s can be explained by the extraordinary upsurge of activity by the international community which has been directed towards conflict prevention and peace making This work explores how the UN can establish global norms to reinforce doctrine of internal and external political responsibility How can the UN ensure that the interests of the peoples of the world receive equal attention as the interests of state parties How does it deal with non sovereign actors not represented directly in the UN who may command power and resources that are more significant than those available to nation states How does it deal with state parties deemed ineffective incapable and illegitimate by their own citizens How can the organization enhance its role with regional organizations Finally how will the UN ensure a positive and proactive role with respect to diverse global

ARTIFICIAL INTELLIGENCE PARAG KULKARNI, PRACHI JOSHI, 2015-02-26 There has been a movement over the years to make machines intelligent With the advent of modern technology AI has become the core part of day to day life But it is accentuated to have a book that keeps abreast of all the state of the art concepts pertaining to AI in simplified explicit and elegant way expounding on ample examples so that the beginners are able to comprehend the subject with ease The book on Artificial Intelligence dexterously divided into 21 chapters fully satisfies all these pressing needs It is intended to put each and every concept related to intelligent system in front of the readers in the most simplified way so that while understanding the basic concepts they will develop thought process that can contribute to the building of advanced intelligent systems Various cardinal landmarks pertaining to the subject such as problem solving search techniques intelligent agents constraint satisfaction problems knowledge representation planning machine learning natural language processing pattern recognition game playing hybrid and fuzzy systems neural network based learning and future work and trends in AI are now under the single umbrella of this book thereby showing a nice blend of theoretical and practical aspects With all the latest information incorporated and several pedagogical attributes included this textbook is an invaluable learning tool for the undergraduate and postgraduate students of computer science and engineering and information technology **KEY FEATURES** Highlights a clear and concise presentation through adequate study material Follows a systematic approach to explicate fundamentals as well as recent advances in the area Presents ample relevant problems in the form of multiple choice questions concept review questions critical thinking exercise and project work Incorporates various case studies for major topics as well as numerous industrial examples

Action to Language via the Mirror Neuron System Michael A. Arbib, 2006-09-07 Mirror neurons may hold the brain's key to social interaction each coding not only a particular action or emotion but also the recognition of that action or emotion in others The Mirror System Hypothesis adds an evolutionary arrow to the story from the mirror system for hand actions shared with monkeys and chimpanzees to the uniquely human mirror system for language In this accessible volume experts from child development computer science linguistics neuroscience primatology and robotics present and analyse the mirror system and show how studies of action and language can illuminate each other Topics discussed in the fifteen

chapters include what do chimpanzees and humans have in common Does the human capability for language rest on brain mechanisms shared with other animals How do human infants acquire language What can be learned from imaging the human brain How are sign and spoken language related Will robots learn to act and speak like humans **The Acquisition of Strategic Knowledge** Thomas R. Gruber,2013-07-10 The Acquisition of Strategic Knowledge deals with the automation of the acquisition of strategic knowledge and describes a knowledge acquisition program called ASK which elicits strategic knowledge from domain experts and puts it in operational form This book explores the dynamics of intelligent systems and how the components of knowledge systems including a human expert interact to produce intelligence Emphasis is placed on how to represent knowledge that experts require to make decisions about actions The move toward abstract tasks and how tasks are solved are discussed along with their implications for knowledge acquisition particularly the acquisition of expert strategies This book is comprised of eight chapters and begins with an overview of the knowledge acquisition problem for strategic knowledge as well as the relevance of strategic knowledge to artificial intelligence The next chapter describes a dialog session between the ASK knowledge acquisition assistant and the user the expert The discussion then turns to software architecture with which to represent strategic knowledge design and implementation of an assistant for acquiring strategic knowledge and approaches to knowledge acquisition Two applications of the ASK system are considered to evaluate the usability of the elicitation technique with real users and to test the adequacy of the strategy rule representation upon which the approach is dependent The scope of ASK its sources of power and its underlying assumptions are also outlined This monograph will be a valuable resource for knowledge systems designers and those interested in artificial intelligence and expert systems Augmented Cognition Dylan D. Schmorow,Dennis McBride,2004-06-30 This special issue provides a sample of research that comprises the foundation of the emergent field of augmented cognition inspired fundamentally from the Defense Advanced Research Projects Agency program Taken together the contributions impart a sense of progress and constitute a first look at achievements from this very ambitious program of research in augmented cognition In addition they convey results that range from improved instrumentation and methodology to demonstrations of enhanced performance under experimentally manipulated conditions Through the Models of Writing D. Alamargot,L. Chanquoy,2012-12-06 This book provides both young and senior scientists with a comparative view of current theoretical models of text production Models are clearly situated in their historical context scrutinized in their further evolution with a fine grained observation of differences between models Very complete and informative to read this book will be useful to people working in teaching of writing or studying this specific human activity *A Knowledge Elicitation Study of Military Planning* Marvin Thordsen,1990 Building the Knowledge Economy Paul M. Cunningham,Miriam Cunningham,Peter Fatelnig,2003 The importance of the Internet and information and communication technologies to the global economy has never been greater This volume aims to facilitate knowledge sharing relevant to everyone irrespective of background thematic or geographic focus **The British**
