String Searching Algorithms Graham A. Stephen, 1994 A bibliographic overview of string searching and an anthology of descriptions of the principal algorithms available Topics covered include methods for finding exact and approximate string matches calculating edit distances between strings and finding common *Flexible Pattern Matching in Strings* Gonzalo Navarro, Mathieu Raffinot, 2002-05-27 Presents recently developed algorithms for searching for simple multiple and extended strings regular expressions exact and approximate matches Pattern Matching Algorithms Alberto Apostolico, Zvi Galil, 1997 Issues of matching and searching on elementary discrete structures arise pervasively in computer science and many of its applications and their relevance is expected to grow as information is amassed and shared at an accelerating pace Several algorithms were discovered as a result of these needs which in turn created the subfield of Pattern Matching This book provides an overview of the current state of Pattern Matching as seen by specialists who have devoted years of study to the field It covers most of the basic principles and presents material advanced enough to faithfully portray the current frontier of research Because of these recent advances this is the right time for a book that brings together information relevant to both graduate students and specialists in need of an in depth reference **Computer Algorithms**

Jun-ichi Aoe, 1994-06-13 Introduces the basic concepts and characteristics of string pattern matching strategies and provides numerous references for further reading The text describes and evaluates the BF KMP BM and KR algorithms discusses improvements for string pattern matching machines and details a technique for detecting and removing the redundant operation of the AC machine Also explored are typical problems in approximate string matching In addition the reader will find a description for applying string pattern matching algorithms to multidimensional matching problems an investigation of numerous hardware based solutions for pattern matching and an examination of hardware approaches for full text search

**Boyer-Moore-type String Searching Algorithms** R. Baeza-Yates, University of Waterloo. Dept. of Computer Science, Régnier, Mireille, 1989 Abstract We present an analysis of Horspool's variant of the Boyer Moore string matching algorithm Although this algorithm is very simple the analysis is not The searching time is linear An exact expression of the linearity constant  $c$  is derived It is proven to be asymptotically formula where  $q$  is the cardinality of the alphabet We exhibit a stationary process and reduce the problem to one of word enumeration The same technique may be used to analyze other variants of the Boyer Moore algorithm
