Lindberg, Juliet Mary Ponder, 2019-11-18 Molluscs comprise the second largest phylum of animals after arthropods occurring in virtually all habitats Some are commercially important a few are pests and some carry diseases while many non marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined This book and its companion volume provide the first comprehensive account of the Mollusca in decades Illustrated with hundreds of colour figures it reviews molluscan biology genomics anatomy physiology fossil history phylogeny and classification This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure movement reproduction feeding digestion excretion respiration nervous system and sense organs Other chapters review the natural history including ecology of molluscs their interactions with humans and assess research on the group Key features of both volumes up to date treatment with an extensive bibliography thoroughly examines the current understanding of molluscan anatomy physiology and development reviews fossil history and phylogenetics overviews ecology and economic values and summarises research activity and suggests future directions for investigation Winston F Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow He has published extensively over the last 55 years on the systematics evolution biology and conservation of marine and freshwater molluscs as well as supervised post graduate students and run university courses David R Lindberg is former Chair of the Department of Integrative Biology Director of the Museum of Paleontology and Chair of the Berkeley Natural History Museums all at the University of California He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years The numerous elegant and interpretive illustrations were produced by Juliet Ponder The Biology of Terrestrial Molluscs G. Cephalopod Behaviour Roger T. Hanlon, John B. Messenger, 2018-03-22 With their large brains elaborate sense organs and complex behaviour cephalopods are among the world's most highly evolved invertebrates This second edition summarises the wealth of exciting new research data stemming from over five hundred papers published since the first volume appeared It adopts a comparative approach to causation function development and evolution as it explores cephalopod behaviour in natural habitats and the laboratory Extensive colour and black and white photography illustrates various aspects of cephalopod behaviour to complement the scientific analysis Covering the major octopus squid and cuttlefish species as well as the shelled Nautilus this is an essential resource for undergraduate and advanced students of animal behaviour as well as researchers new to cephalopods in fields such as neuroscience and conservation biology By highlighting the gaps in current knowledge the text looks to inform and to stimulate further study of these enigmatic and beautiful animals

The Nervous Systems of Invertebrates: An Evolutionary and Comparative Approach O. Breidbach, W. Kutsch, 2013-03-07 In this volume outstanding specialists review the state of the art in nervous system research for all main invertebrate groups They provide a comprehensive up to date analysis important for everyone working on neuronal aspects of single groups as well as taking into account the phylogenesis of invertebrates The articles report on recently gained knowledge about diversification in the invertebrate nervous systems and demonstrate the analytical power of a comparative approach Novel techniques in molecular and developmental biology are creating new perspectives that point toward a theoretical foundation for a modern organismic biology The comparative approach as documented here will engage the interest of anyone challenged by the problem of structural diversification in biology

The Mollusca Karl M. Wilbur, 1983 *Squid as Experimental Animals* W.J., Jr. Adelman, J.M. Arnold, D.L. Gilbert, 2013-06-29 The predecessor to this book was *A Guide to the Laboratory Use of the Squid Loligo pealei* published by the Marine Biological Laboratory Woods Hole Massachusetts in 1974 The revision of this long out of date guide with the approval of the Marine Biological Laboratory is an attempt to introduce students and researchers to the cephalopods and particularly the squid as an object of biological research Therefore we have decided to expand on its original theme which was to present important practical aspects for using the squid as experimental animals There are twenty two chapters instead of the original eight The material in the original eight chapters has been completely revised Since more than one method can be used for accomplishing a given task some duplication of methods was considered desirable in the various chapters Thus the methodology can be chosen which is best suited for each reader's requirements Each subject also contains a mini review which can serve as an introduction to the various topics Thus the volume is not just a laboratory manual but can also be used as an introduction to squid biology The book is intended for laboratory technicians advanced undergraduate students graduate students researchers and all others

who want to learn the purpose methods and techniques of using squid as experimental animals This is the reason why the name has been changed to its present title Preceding the chapters is a list of many of the abbreviations prefixes and suffixes used in this volume Paleontology and Neontology of Cephalopods M. R. Clarke,E. R. Trueman,2013-10-22 Paleontology and Neontology of Cephalopods examines information that throws new light on the evolution of coleoids This book is part of a multivolume work The Mollusca which attempts to provide comprehensive treatment of major areas of molluscan research The Mollusca is intended to serve several disciplines zoology biochemistry physiology and paleontology It will prove useful to researchers and to all others with interests in mollusks The book begins with a review of the main features of cephalopod evolution This is followed by separate chapters on the evolution of the gladius in coleoids the buccal mass of Cephalopoda beaks of living coleoid Cephalopoda cephalopod hooks statoliths of cephalopods buoyancy and locomotion in recent cephalopods and evolution of the cephalopod brain and cephalopod statocyst Subsequent chapters deal with the photophore structure and evolution within the Euprymna scolopes the interrelationships of genera within the Ommastrephidae evolutionary pathways traversed by the cephalopod family Cranchiidae the cephalopod fauna of the European Mediterranean and the evolution of recent cephalopods *Neurovascular Immunology* Thomas C. Moore,1992-10-28 Neurovascular Immunology provides an in depth exploration of the neurovascular branch of the neuro immune axis The book includes discussions regarding the role of neurovascular molecules and their evolutionary history in biological defense their major functions in invertebrates their roles in terrestrial vertebrates and their involvement in the organization and function of the vascular and nervous systems including the immune response defense system The book will appeal to all researchers practitioners and students interested in the functions of the nervous vascular and immune response systems **Evolutionary Origin of Sensory and Neurosecretory Cell Types** Gerhard Schlosser,2021-06-17 Most vertebrate cranial sense organs arise from placodes These placodes give rise to sensory neurons that transmit information to the brain and neurosecretory cells This book reviews the evolutionary origin of the sensory and neurosecretory cell types It summarizes our current understanding of vertebrate evolution clarifies conceptual issues relating to homology and evolutionary innovation of cell types compares the sensory and neurosecretory cell types with similar cell types in other animals and addresses the question of how cranial placodes evolved as novel structures in vertebrates by redeploying pre existing and sometimes evolutionarily ancient cell types
