**Aspergillus Classification** Robert A. Samson, John I. Pitt, 2013-11-11 In our view the First International Penicillium and Aspergillus Workshop held in Baarn and Amsterdam in May 1985 was a great success The assembly in one place of so many specialists in these two genera produced both interesting viewpoints and lively discussions But more particularly a remarkable cohesion of ideas emerged borne primarily of the realisation that taxonomy has passed from the hands of the solitary morphologist The future of taxonomy lay in collaborative and multidisciplinary studies embracing morphology physiology and newer methodologies Penicillium and Aspergillus Workshop was borne logically The Second International from the first and was held in Baarn on May 8 12 1989 It was attended by 38 scientists from 16 countries At this Workshop we have attempted to move further into new methods especially by bringing together molecular biologists medical and food mycologists and biochemists as well as more traditional taxonomists We feel that the meeting contributed greatly to dialogue between taxonomists and also fundamental and applied mycologists At the meeting we became aware that the approach to taxonomy of these genera is now becoming more pragmatic with an increasing emphasis on consensus and on stability of names This is a noteworthy development which we as editors welcome So many species in Penicillium and Aspergillus are economically important in biotechnology foods and medicine and practical stable taxonomy is of vital importance These Proceedings comprise 40 papers divided into 9 chapters

The inclusion of global legislation and regulatory aspects on the topic makes this a comprehensive review for every practitioner, clinical researcher in industry and academia and MSc and PhD student of toxicology. Different sections cover skin structure and function, principles and measurement of skin absorption, clinical aspects of dermal toxicity and in vitro alternatives. A section on regulatory and legislative aspects includes case studies from the UK that fulfill European Union and US FDA requirements. A glossary provides definitions of technical terms and the chapters contain an introduction, learning boxes and summary section for ease of use. Includes a chapter on drug delivery through the skin. Addresses risk assessment, a key area for the interpretation of skin absorption data that is rarely covered.

*Plant Aging* Roberto Rodríguez,R.Sanchez Tamés,D.J. Durzan,2012-12-06 For many the terms aging maturation and senescence are synonymous and used interchangeably but they should not be Whereas senescence represents an endogenously controlled degenerative programme leading to plant or organ death genetic aging encompasses a wide array of passive degenerative genetic processes driven primarily by exogenous factors Leopold 1975 Aging is therefore considered a consequence of genetic lesions that accumulate over time but by themselves do not necessarily cause death These lesions are probably made more severe by the increase in size and complexity in trees and their attendant physiology Thus while the withering of flower petals following pollination can be considered senescence the loss of viability of stored seeds more clearly represents aging Norden 1988 The very recent book *Senescence and Aging in Plants* does not discuss trees the most dominant group of plants on the earth Yet both angiospermic and gymnospermic trees also undergo the above phenomena but less is known about them Do woody plants senesce or do they just age What is phase change Is this synonymous with maturation While it is now becoming recognized that there is no programmed senescence in trees senescence of their parts even in gymnosperms e g needles of temperate conifers last an average of 3 5 years is common but aging is a readily acknowledged phenomenon In theory at least in the absence of any programmed senescence trees should live forever but in practice they do not
