Hornstein, 2013-06-28 As Ruskin suggests in his *Seven Lamps of Architecture* We may live without architecture and worship without her but we cannot remember without her We remember best when we experience an event in a place But what happens when we leave that place or that place no longer exists This book addresses the relationship between memory and place and asks how architecture captures and triggers memory It explores how architecture exists as a material object and how it registers as a place that we come to remember beyond the physical site itself It questions what architecture is in the broadest sense assuming that it is not simply buildings Rather architecture is considered to be the mapping of physical mental or emotional space The idea that we are all architects in some measure as we actively organize and select pathways and markers within space is central to this book's premise Each chapter provides a different example of the manifold ways in which the physical place of architecture is curated by the architecture in our mental space our imaginary toolbox when we think of a place and look at a photograph or visit a site and describe it later or send a postcard By connecting architecture with other disciplines such as geography visual culture sociology and urban studies as well as the fine and performing arts this book puts forward the idea that a conversation about architecture is not exclusively about formal isolated buildings but instead must be deepened and broadened as spatialized visualizations and experiences of place *InTerior Design -*

Convolute Håkan Gulliksson, The home is under siege both because it is an enormous potential market and because of changing human behaviours It is also interesting as a platform for new technology and for analysis of everyday life as in this essay We will describe the home as a context where the interactors are humans inhabitants things artefacts in the home and information The interactions at home are activities and routines This essay presents and structures quotes and thoughts on the organization and decoration of the home another huge topic To limit the scope somewhat we will look for theory to discuss only related to homes of the western middle class The essay is yet another piece in a puzzle to understand information technology in the future **Urban Blue Spaces** Simon Bell, Lora E. Space Syntax Laura Vaughan, John Peponis, Ruth Conroy Dalton, 2025-04-30 Professor Bill Hillier spent most of his career at The Bartlett University College London where he founded and developed with a team of

colleagues an original research programme that set the study of architecture on a firm scientific basis His transformational way of thinking about buildings and cities influenced generations of scholars researchers and practitioners within the built environment disciplines and way beyond in fields ranging from archaeology and biology to physics and zoology Space Syntax Selected papers by Bill Hillier provides a canon of works that reflects the progression of Hillier s ideas from the early publications of the 1970s to his most recent work published before his death in 2019 This selection of influential works ranges from his papers on architecture as a professional and research discipline through to his later papers that present a theory of the spatial structure of the city and its social functions By bringing together writing from across his career span of half a century with specially commissioned introductions by a wide range of international experts in the field we are able to contextualise and show the range and evolution of Hillier s key ideas

Crystal Growth of Multifunctional Borates and Related Materials Nikolay I Leonyuk,2019-05-03 Borate crystals are attractive for different technological applications because of their favorable physical and chemical properties like stability and high transparency both high thermal and non linear optical coefficients making them ideal active media for highly efficient solid state lasers In this Special Issue different aspects of multifunctional borate crystals are discussed including ortho and oxyorthoborates and compounds with condensed anions as well as their nonlinear optical and laser properties and piezoelectric characteristics For this reason complex investigations of the phase relationships in multi component borate melts the study of crystal growth conditions of novel high temperature borates and the development of the crystallization conditions composition structure and properties concept will provide a scientific basis for growth technologies of high performance electronic and optical devices and components with a variety of industrial medical and many other applications In the meantime these relationships can help to estimate the affinity of synthetic borate materials with their natural prototypes and structural analogues

Multi-Agent Systems Adelinde M. Uhrmacher, Danny Weyns, 2018-10-08

Methodological Guidelines for Modeling and Developing MAS Based Simulations The intersection of agents modeling simulation and application domains has been the subject of active research for over two decades. Although agents and simulation have been used effectively in a variety of application domains, much of the supporting research remains scattered in the literature, too often leaving scientists to develop multi agent system MAS models and simulations from scratch. Multi Agent Systems Simulation and Applications provides an overdue review of the wide ranging facets of MAS simulation including methodological and application oriented guidelines. This comprehensive resource reviews two decades of research in the intersection of MAS simulation and different application domains. It provides scientists and developers with disciplined engineering approaches to modeling and developing MAS based simulations. After providing an overview of the field's history and its basic principles as well as cataloging the various simulation engines for MAS, the book devotes three sections to current and emerging approaches and applications. Simulation for MAS explains simulation support for agent decision making, the use of simulation for the design of self organizing systems, the role of software architecture in simulating MAS and the use of simulation for studying learning and stigmergic interaction. MAS for Simulation discusses an agent based framework for symbiotic simulation, the use of country databases and expert systems for agent based modeling of social systems, crowd behavior modeling, agent based modeling and simulation of adult stem cells and agents for traffic simulation. Tools presents a number of representative platforms and tools for MAS and simulation including Jason, James II, SeSAM and RoboCup Rescue. Complete with over 200 figures and formulas, this reference book provides the necessary overview of experiences with MAS simulation and the tools needed to exploit simulation in MAS for future research in a vast array of applications including home security, computational systems, biology and traffic management.
