The Response of Western Forests to Air Pollution Richard K. Olson, Dan Binkley, Margi Böhm, 2013-12-21 John Sculley In the short history of personal computing the task of the software programmer has been one of the least recognized but one of the most significant in the industry In addition to defining the problems and presenting the solutions the software programmer is confronted with the challenge of having to predict what combination of ideas and technologies will move the industry forward in the most compelling way Even though we've seen the development of tremendous applications in a surprisingly short period of time the most difficult problems often surface when we try to elevate a successful local idea to the international arena In the case of Apple Computer these challenges become especially profound when you consider that Apple sells Macintosh not just in the United States but in Japan China the Middle East Africa Eastern Europe and even to the United Nations itself Of course this means that the personal computer must work everywhere around the world But more significantly it also means that the software must reflect the uniqueness of a given culture its language morals and even its sense of humor To step away from a narrowly defined nationally based paradigm for software development programmers management and entire corporations must learn to recognize what elements of an interface problem solving technique documentation illustration package design and advertisement are local and which elements are appropriate for global

Heath, 2012-12-06 The idea for this book arose in 1993 after the Free State of Bavaria through its Bayrisches Staatsministerium für Landesentwicklung und Umweltfragen Bavarian Ministry of Regional Development and the Environment decided to discontinue both the Bavarian project management PBWU for forest decline research and the multidisciplinary field research on the Wank Mountain in the Alps near Garmisch Forest decline through the action of ozone and other photooxidants was a main topic of the supported research in the Alps and will be a topic of new investigations in the Bavarian Forest Many interesting results were obtained but the researchers involved have not had sufficient time to allow reliable conclusions to be drawn It was therefore decided to ask international experts for contributions in order to summarize the best available evidence of a possible link between ozone and forest decline a topic which has been studied in the USA since the late 1950s and in Europe since the early 1980s The original idea of Waldsterben as an irreversible large scale dieback of forests in Germany was soon recognized to be wrong Forschungsbeirat 1989 However the new criteria used for the official German and European damage inventories loss or yellowing of needles or leaves tree morphology indicate that persistently high percentages of damaged spruce and pine remain and there is an increasing percentage of damaged beech and oak with a high proportion of biotic disease Forschungsbeirat 1989 UN ECE 1995      *Computer and Machine Vision* E. wildlife management National polls suggest that the public trusts government agencies to solve environmental problems yet such trust is low or non-existent in areas of controversy such as the protection of threatened and endangered species This study explored the role of social trust in understanding views of threatened and endangered species management in the National Forests of southern California The 127 participants surveyed lived in or near a National Forest or were recreational and or other users of the National Forest The results suggest that trust in Forest Service management of wildlife relates to perceived similarity between individual values regarding species protection and Forest Service values Participants who believe the Forest Service shares their values have a high trust those who believe the Forest Service does not share their values have a low trust The most trusting tend to believe that species protection should be the primary principle guiding forest management and that the Forest Service consistently operates according to these principles Those low in trust believe forest management should be based on the fulfillment of human needs they perceive that the Forest Service operates inconsistently according to their values The study suggests that social trust is a significant predictor of approval of species management practices
