Sleep And Sedation In Critical Care An Issue Of Critical Care Nursing Clinics:

Sedation and Sleep in Critical Care: An Update, An Issue of Critical Care Nursing Clinics Jan Foster, 2016-07-28
Sedation is a necessary component of care for critically ill and injured individuals. Sedatives assist in coping with mechanical ventilation and other invasive devices and help patients tolerate procedures and noxious stimuli in the intensive care unit. Sedatives are also useful in the control of agitation and delirium. In addition to fundamental humane reasons, calming patients with sedatives provides physiologic benefits such as reducing oxygen consumption expended during restlessness and prevents dislodgement of life-preserving tubes and catheters. When administering sedatives to manage critically ill patients, clinicians must be cognizant of the many complex issues surrounding their use. This issue, edited by Consulting Editor Dr. Jan Foster, provides current updates in this area, including new guidelines and a focus on delirium. **Optimizing Sleep in the Intensive Care Unit, An Issue of Critical Care Nursing Clinics of North America, E-Book** Karen S. Heart Failure, An Issue of Critical Nursing Clinics Jennifer Kitchens, 2016-01-07 Heart failure is the only cardiovascular disease that is increasing. The impact on the critical care environment and the health care system as a whole is significant from both a cost and burden to the system perspective. There are 6.5 million hospital days a year and nearly 40 billion dollars in yearly health care costs attributed to heart failure in the United States. There are more Medicare monies spent for diagnosing and treating heart failure than any other Diagnosis Related Group. There is a 24% hospital re admission rate for this diagnosis which leads to financial implications for health care systems. The human cost is also significant. Less than half of Americans diagnosed with heart failure survive greater than 5 years. The ongoing health care needs and cost of this chronic disease takes a significant toll on patients' finances, time and quality of life. Over 2.9 billion dollars is spent annually on the pharmaceutical management of heart failure in the United States. This diagnosis is the leading cause of hospitalization for patients who are 65 years of age and older. Few health care providers in the critical care environment are not affected by heart failure on a routine basis. Caring for these patients and their families is both a challenging and yet a rewarding experience. This edition will provide critical care nurses with a comprehensive heart failure review which is essential in caring for this challenging population.
