impairment on communication and psychosocial functioning Section 3 considers the individual in their environment their family work and leisure Section 4 elaborates on the process of enablement in a non prescriptive manner The authors approach the problems and needs from the standpoint of what the patient client is seeking Enablement is seen as a team effort between the professionals the patient and their family in an ever changing environment This entails using any relevant techniques to ensure the well being of the individual with hearing impairment that end remains very much their goal The book also has a companion website www.wiley.com/go/stephens which hosts additional downloadable documents as well as a demonstration of the concept of the signal to noise ratio

Enhancing Communication Skills of Deaf & Hard of Hearing Children in the Mainstream James J. Mahshie, 2005 With many children who are deaf or hard of hearing now integrated in mainstream classroom settings speech language pathologists and school based clinicians are encountering this population in growing numbers This book is designed to help clinicians who may have little or no experience with this population to understand its unique communication needs and develop clinical skills for working with them It takes a holistic view of children who are deaf or hard of hearing and stresses the child as a communicator rather than focusing on the disorder itself and provides a useful framework for viewing and assessing children s communication abilities and goals at all stages of language development It also includes specific assessment and treatment techniques to help develop and improve communication skills in order to maximize this populations potential for learning
