

SITE PLANNING AND DESIGN FOR THE ELDERLY

The background of the cover is a detailed architectural site plan. It features several rectangular building footprints, some with internal room divisions. A network of paths or roads winds through the site, connecting different areas. Numerous circular symbols of varying sizes are scattered throughout, representing trees or landscaping elements. The drawing is in a light, sketchy style, typical of preliminary site planning.

Journal of Rehabilitation Research & Development ,2007 **Journal of Rehabilitation R & D** ,2007 **Compensating for Psychological Deficits and Declines** Roger A. Dixon,Lars B.,ckman,Lars Backman,2013-06-17 The concept of compensation in psychology refers to processes through which a gap or mismatch between current accessible skills and environmental demands is reduced or closed These gaps can be principally the result of losses such as those associated with aging or interpersonal role

changes injuries such as those that may occur to the neurological or sensory systems organic or functional diseases such as the dementias or schizophrenia and congenital deficits such as those apparent in autism or some learning disabilities Whether the demand skill gaps can be bridged completely reduced only moderately or are impossible to close depends on a variety of factors In every case however the guiding notions of compensation are that some such deficits may be amendable the continuation of the effects of the gap may be avoidable and some functioning may be recoverable In this sense compensation is related to adaptation it is about overcoming deficits managing the effects of losses and promoting improvement in psychological functioning Compensation is a concept that has a long and rich history in numerous domains of psychological research and practice To date however few of the relevant research domains have benefitted explicitly or optimally from considering alternative perspectives on the concept of compensation Although researchers and practitioners in several areas of psychology have actively pursued programs with compensation as a central concept communication across disciplinary divides has been lacking Comparing and contrasting the uses and implications of the concept across neighboring and even not so adjacent areas of psychology can promote advances in both theoretical and practical pursuits The goal of this book is to carry inchoate integrative efforts to a new level of clarity To this end the editors have recruited major authors from selected principal areas of research and practice in psychological compensation The authors review the current state of compensation scholarship in their domains of specialization State of the art reviews of this rapidly expanding area of scholarship are therefore collected under one cover for the first time In this way a wide variety of readers who might otherwise rarely cross professional paths with one another can quickly learn about alternative preferences agendas and methods as well as novel research results interpretations and practical applications Designed to contain broad deep and current perspectives on compensation this volume continues the processes of explicating the concept of compensation linking and distinguishing compensation from neighboring concepts describing the variety of compensatory mechanisms operating in a wide range of phenomena and illustrating how compensatory mechanisms can be harnessed or trained to manage losses or deficits and to promote gains or at least maintenance of functioning
