even harder to maintain in ways that are mutually beneficial This book focuses on science and technology connective ventures and the complexity inherent in bringing such worlds together The authors have been in the business of developing such connections and this book brings them together to describe how and why making connections can support the science technology education sector the technology science communities and the wider sociocultural life we all inhabit A range of illustrative examples of connections in action provide an empirical basis from which to explore and gain insight into the issues for and potential of such connective ventures alongside a rich mix of critical commentary arguments cautions and challenges Five key principles have been distilled from the collective experience and wisdom of the authors serving to capture that which underpins effective and efficient connective initiatives Each principle is accompanied by a set of questions that reflect the issues raised and successes illustrated throughout the book It is hoped these principles and questions will serve to guide people interested in developing funding and or participating in future connective initiatives in the fields of science and technology
