Webb,1987-03-17 Aging and Age-Related Disorders Stephen Bondy,Kenneth Maiese,2010-09-02 Features that characterize the aging process include the gradual accumulation of cell damage after prolonged exposure to oxidative and inflammatory events over a lifetime In addition to the accretion of lesions the intrinsic levels of pro oxidant and aberrant immune responses are elevated with age These adverse events are often further enhanced by the chronic and slow progressing diseases that characterize the senescent brain and cardiovascular system The incidence of some disorders such as Alzheimer s disease and vascular diseases are sufficiently prevalent in the extreme elderly that these disorders can arguably be considered normal Aging and Aging Related Disorders examines the interface between normal and pathological aging and illustrates how this border can sometimes be diffuse It explores and illustrates the processes underlying the means by which aging becomes increasingly associated with inappropriate levels of free radical activity and how this can serve as a platform for the progression of age related diseases The book provides chapters that examine the interactive relationship between systems in the body that can enhance or sometimes even limit cellular longevity In addition specific redox mechanisms in cells are discussed Another important aspect for aging discussed here is the close relationship between the systems of the body and exposure to environmental influences of oxidative stress that can affect both cellular senescence and a cell s nuclear DNA What may be even more interesting to note is that these external stressors are not simply confined to illnesses usually associated with aging but can be evident in maturing and young individuals A broad range of internationally recognized experts have contributed to this book Their aim is to successfully highlight emerging knowledge and therapy for the understanding of the basis and development of aging related disorders **Encyclopedia of Sleep** ,2013-01-17 In a world of 24 hour media saturation sleep has become an increasingly fraught enterprise The award winning four volume Encyclopedia of Sleep Four Volume Set is the largest reference either online or in print on the subject of sleep Written to be useful for the novice and the established researcher and clinician Topic areas will include sleep across the life cycle and in other species sleep and women sleep and the elderly pediatric sleep sleep deprivation and loss sleep mechanisms sleep physiology and pathophysiology sleep disorders neurobiology chronobiology pharmacology and impact of other disorders on sleep Recognizing the many fields that are connected to sleep science the editorial team has been carefully chosen to do justice to this highly interdisciplinary field of study The steady growth of researchers and clinicians in the sleep field attests to the continued interest in the scientific study of sleep and the management of patients with sleep disorders and anyone involved in this exciting field should find this work to be an invaluable reference 2013 PROSE Award winner for Multivolume Reference in Science from the Association of American Publishers Thoroughly interdisciplinary looks at sleep throughout the life cycle with exceptional coverage of basic sleep concepts the physiology of sleep as well as sleep disorders of all descriptions Excellent coverage of sleep and special
