Selected Water Resources Abstracts ,1987 Advanced Technologies for the Quality Control and Standardization of Plant Based Medicines Jiang Xu,Caroline Howard,2020-06-18 Herbs and herbal products are of paramount importance for human health To be able to guarantee safety and quality standards and testing methods are needed Pharmacopoeias contain quality control protocols setting the standards which are then required by governments The quality traits are many including the intrinsic variables of medicinal plant e g the levels of the active compounds and the absence of possibly natural occurring

toxic compounds On the other hand many quality traits are related to agricultural conditions and practices or to the harvesting and post harvest processing With so many variables quality control of the end product becomes extremely complex time consuming and costly To ensure the quality of medicinal plants for human consumption quality management the use of good practices at each step from seed to final product becomes a crucial aspect In general quality control includes the inspection of the product's identity purity and content based on its physical chemical or biological properties To ensure the quality of herbal medications criteria such as botanical quality type of preparation physical constants adulteration contaminants chemical constituents pesticides residues et al should be examined Meanwhile authentication of herbs is needed to avoid possible adulteration or contaminating plants even toxic herbs such as *Aristolochia* species Many of the methods are long standing such as microscopy in combination with color reactions but some 50 years ago chromatography developed as a major tool for both qualitative and quantitative analysis of herbal preparations Nowadays research is working on the improvement of these methods and on the development of novel tools For instance next generation sequencing and mass spectrometry imaging are emerging as new technologies for the quality control of herbal medicines With these technologies quick testing of herbal products and of mixed herbal powder preparations including the testing for specific plant parts botanical drugs can be achieved Also novel chemical tools such as metabolomics and Near Infrared Red NIR spectroscopy are being developed as powerful tools to identify and to link these with activity by using chemometric tools such as multivariate analysis Finally progress of informatic tools such as machine learning helps to deal with the big data generated by sequencing or mass spectrometry However these new technologies like all other new born technologies should be tested and perfected for a broad range of products

Internal Marketing David M. Brown, 2020-10-29 This book traces the development of internal marketing from initial conceptualisation through to the current issues It identifies both significant underlying tensions between major theorists and areas in which new perspectives may enrich our understanding of this crucial subject Internal marketing is the use of traditional strategies by organisations to market themselves to their employees Presented in bite sized sections each of which dissects the most important themes and concepts underpinning the subject this book explains how subsidiary areas of study have emerged and suggests how the introduction of concepts and perspectives from channel management literature can help analyse the dyadic encounters in which internal marketing takes place Brown critically extends the scope of internal marketing theory yet further by presenting and analysing new interview transcripts to suggest that internal demarketing an organisation making itself less attractive to its employees may sometimes be undertaken intentionally Internationally applicable and highly accessible Internal Marketing is perfect for students teachers and researchers with an interest not only in internal marketing but also in employer relations internal branding employer branding and internal communications It uses clear language and gradually introduces the reader to more sophisticated theoretical concepts step by step with a uniquely focused critical and comprehensive thematic coverage of internal marketing and its extensive theoretical outputs

Multiple Criteria Decision Making Applications in Environmentally Conscious Manufacturing and Product Recovery Surendra M. Gupta, Mehmet Ilgin, 2017-10-17 In order to ensure environmentally responsible production and disposal of products local governments are imposing stricter environmental regulations some of which even require manufacturers to take back their products at the end of the product's useful life These government regulations together with increasing environmental awareness have forced manufacturers to invest in environment conscious manufacturing The multiple Criteria Decision Making Techniques presented in this book can be employed to solve the problems of environment conscious manufacturers in product design logistics disassembly and remanufacturing

Warranty and Preventive Maintenance for Remanufactured Products Ammar Y. Alqahtani, Surendra M. Gupta, 2018-12-12 The exponential increase in the development of technology coupled with the customers immense desire to possess the newest technological products makes for truncated product lifespans which instigates a substantial upsurge in their rate of disposal Attempts have been made to establish specialized product recovery facilities with the intention of diminishing the volume of accumulated waste delivered to landfills using product recovery procedure such as remanufacturing The economic benefits produced by remanufacturing also portray the role of product recovery in a more attractive light The quality of a remanufactured product is uncertain for some consumers Therefore these consumers possess insecurities in deciding whether or not the remanufactured products will render the same expected performance This ambiguity regarding a remanufactured product could possibly result in the consumer deciding against its purchase With such consumer apprehension remanufacturers often seek market mechanisms that provide reassurance as to the stable durability that these products still maintain One strategy that the remanufacturers often use is the utilization of the premise of offering product warranties with preventive maintenance on their products This book is concerned with the practice and theory of warranty management and preventive maintenance particularly in relation to remanufactured products warranties Models developed in this book can be used for making the right decisions in offering renewable nonrenewable one and two dimensional warranty policies and for managerial decision in considering maintenance contracts or outsourcing maintenance for remanufactured components and products Features Discusses a variety of warranty policies and preventive maintenance of remanufactured products first book to do so Presents mathematical models and applications for warranty policies using examples and simulation results Considers cost and optimization problems from the remanufacturer's and buyer's points of views Provides a foundation for academicians interested in building models in the area of warranty and preventive maintenance analysis of remanufactured products Offers the essential methodology needed by practitioners involved with warranty and preventive maintenance analysis along with extensive references for further research

Management of Chemical and Biological Samples for Screening Applications Mark Wigglesworth, Terry Wood, 2012-12-05 Filling an obvious gap in the scientific literature this practice oriented reference is the first to tie together

the working knowledge of large screening centers in the pharmaceutical and biotechnological field. It spans the entire field of this emerging discipline from compound acquisition to collection optimization for specific purposes to technology and quality control. In so doing it applies two decades of expertise gathered by several large pharmaceutical companies to current and future challenges in high throughput screening. With its treatment of libraries of small molecules as well as biobanks containing biomolecules, microorganisms and tissue samples, this reference is universally applicable for any molecular scientist involved in a large screening program.
