*Inventing Global Ecology* Michael L. Lewis,2004 Table of contents **The Photography of Invention** ,1989 *Every American an Innovator* Matthew Wisnioski,2025-05-13 A landmark cultural history that reveals how the relentless pursuit of innovation has transformed our society our institutions and our inner selves For half a century innovation served as a universal good in an age of fracture That consensus is cracking While the imperative to innovate for a better future continues to fuel systemic change around the world critics now assail innovation culture as an engine of inequality or accuse its do gooders of woke groupthink What happened Drawing on a decade of research *Every American an Innovator* by Matthew Wisnioski investigates how innovation a once obscure academic term became ingrained in our institutions our education and our beliefs about ourselves Wisnioski argues that innovation culture did not spring from the digital revolution nor can it be boiled down to heroic entrepreneurs or villainous capitalists Instead he reveals the central role of a new class of experts in spreading toolkits and mindsets from the cornfields of 1940s Iowa to Silicon Valley tech giants today This group of engineers philosophers bureaucrats and business leaders posited that innovators were society s most important change agents and remade the nation in their image The innovation culture they built transcended partisan divisions and made strange bedfellows Wisnioski shows how Kennedy era policymakers inspired President Nixon s dream of a Nobel Prize for innovators how anti military professors built the first university incubators for entrepreneurs how radical feminists became millionaire consultants how demands for a rust belt manufacturing renaissance inspired theories of a global creative class how programs that encouraged girls and minority children to pursue innovative lives changed the nature of childhood play and why the

innovation consensus is now in dispute      **Wait** Frank Partnoy,2012-06-26 What do these scenarios have in common a professional tennis player returning a serve a woman evaluating a first date across the table a naval officer assessing a threat to his ship and a comedian about to reveal a punch line In this counterintuitive and insightful work author Frank Partnoy weaves together findings from hundreds of scientific studies and interviews with wide ranging experts to craft a picture of effective decision making that runs counter to our brutally fast paced world Even as technology exerts new pressures to speed up our lives it turns out that the choices we make unconsciously and consciously in time frames varying from milliseconds to years benefit profoundly from delay As this winning and provocative book reveals taking control of time and slowing down our responses yields better results in almost every arena of life even when time seems to be of the essence The procrastinator in all of us will delight in Partnoy s accounts of celebrity delay specialists from Warren Buffett to Chris Evert to Steve Kroft underscoring the myriad ways in which delaying our reactions to everyday choices large and small can improve the quality of our lives

**Who Invented the Computer?** Alice R. Burks,2010-10-29 In 1973 Federal District Judge Earl R Larson issued a ruling in a patent case that was to have profound and long lasting implications for the dawning computer revolution Against all expectations the judge ruled against Sperry Rand Corp which claimed to hold the patent on the first computer dubbed the ENIAC and was demanding huge royalties on all electronic data processing sales by Honeywell Inc and other large competitors The judge came to the conclusion that in fact the ENIAC was not the first computer but was a derivative of an obscure computer called the ABC which had been developed in the late thirties by a largely unknown professor of physics and mathematics at Iowa State University named John V Atanasoff Looking back today from our digital world at what was then a little publicized trial it is clear that the judge s decision had enormous repercussions If Judge Larson had ruled the other way in favor of the patent claim subsequent manufacturers of computing hardware would have had to obtain a license from Sperry Rand and the course of computing history would likely have been very different from the galloping revolution we have all witnessed in the past three decades This book centers on this crucial trial arguing that Judge Larson correctly evaluated the facts and made the right decision even though many in the computing community have never accepted Atanasoff as the legitimate inventor of the electronic computer With meticulous research Alice Rowe Burks examines both the trial and its aftermath presenting telling evidence in convincing and absorbing fashion and leaving no doubt about the actual originator of what has been called the greatest invention of the 20th century
