*The End of Finance* Massimo Amato,Luca Fantacci,2013-12-19 This new book by two distinguished Italian economists is a highly original contribution to our understanding of the origins and aftermath of the financial crisis The authors show that the recent financial crisis cannot be understood simply as a malfunctioning in the subprime mortgage market rather it is rooted in a much more fundamental transformation taking place over an extended time period in the very nature of finance The end or purpose of finance is to be found in the social institutions by which the making and acceptance of promises of payment are made possible that is the creation and cancellation of debt contracts within a specified time frame Amato and Fantacci argue that developments in the modern financial system by which debts are securitized has endangered this fundamental credit debt structure The illusion has been created that debts are universally liquid in the sense that they need not be redeemed but can be continually sold on in increasingly extensive global markets What appears to have reduced the riskiness of default for individual agents has in fact increased the fragility of the system as a whole The authors trace the origins of this profound transformation backwards in time not just to the neoliberal reforms of the 1980s and 90s but to the birth of capitalist finance in the mercantile networks of the sixteenth and seventeenth centuries This long historical perspective and deep analysis of the nature of finance enables the authors to tackle the challenges we face today in a fresh way not simply by tinkering with existing mechanisms but rather by asking the

more profound question of how institutions might be devised in which finance could fulfil its essential functions
