Nondestructive Evaluation of Wood Forest Service (U S),Forest Products Laboratory (U S),Robert J. Ross,2015
Nature s engineering of wood through genetics wind and weather creates a wide variability in wood as a material
Consequently manufacture and users of wood products are frequently frustrated in dealing with the forest resource
Manufacturers sometimes argue that wood is difficult to consistently process into quality products because of the wide range
of properties that exist in this raw material Users of wood products can be equally frustrated with the performance variability
found in finished products Nondestructive evaluation NDE technologies have contributed significantly toward eliminating the
cause of these frustrations NDE technologies have been developed and are currently used in lumber and veneer grading
programs that result in engineered materials that have consistent well defined performance characteristics This brief volume
explores some of the processes that are used to manufacture wood including green wood technology and provides a bit of
history to wood production and its uses too Other products that may interest you from the US Forest Service can be found at
