Standard Guidelines for Artificial Recharge of Ground Water, 2001-01-01 Standard Guidelines for Artificial Recharge of Ground Water describes the steps necessary to plan design construct maintain operate and close a project for artificial recharge of groundwater The recharge may be accomplished either by applying water to the ground surface for infiltration or by placing it directly into aquifers through wells This Standard also describes the economic environmental and legal considerations including water rights laws and regulations as well as field investigation and testing procedures that may be applicable The guidelines cover situations that may occur in many different types of projects and can be applied to basic or small projects by selecting the portions of these guidelines that are appropriate to the proposed project **Ground Water Recharge Using Waters of Impaired Quality** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Ground Water Recharge, 1994-02-01 As demand for water increases water managers and planners will need to look widely for ways to improve water management and augment water supplies This book concludes that artificial recharge can be one option in an integrated strategy to optimize total water resource management and that in some cases impaired quality water can be used effectively as a source for artificial recharge of ground water aquifers Source water quality characteristics pretreatment and recharge technologies transformations during transport through the soil and aquifer public health issues economic feasibility and legal and institutional considerations are addressed The book evaluates three main types of impaired quality water sources treated municipal wastewater stormwater runoff and irrigation return flow and describes which is the most consistent in terms of quality and quantity Also included are descriptions of seven recharge projects **Managed Groundwater Recharge and Rainwater Harvesting** Dipankar Saha, Karen G. Villholth, Mohamed Shamrukh, 2024-03-29 This book through its 19 chapters highlights success stories research outputs and various government schemes and actions taken on groundwater recharge and rainwater harvesting in developing countries The interventions are focused on resolving water crises through supply side interventions improving water quality and addressing climate change impacts The contributions from across the globe shows how these approaches have been successful in supplementing potable water supply reducing the intensity of overexploitation of groundwater resources better storm water management intensifying treated grey water reuse and improving groundwater quality and environmental flows The chapters deal with a wide array of issues from local scale experimentation and management to government schemes adopted community involvement private sector engagement addressing socio economic issues and policy interventions The book includes contributions made by researchers government departments civil societies policymakers and practitioners from 15 Non Aligned Movement NAM and other developing countries namely Afghanistan Bangladesh Chile Colombia Egypt Guatemala India Jordan Morocco Nigeria Palestine Qatar South Africa Sri Lanka and Tunisia The book places before the readers the strives being undertaken in the Global South to address the sustainability of
