Theories of International Relations Siegfried Schieder, Manuela Spindler, 2014-05-23 This book is a comprehensive guide to theories of International Relations (IR). Given the limitations of a paradigm based approach, it sheds light on eighteen theories and new theoretical perspectives in IR by examining the work of key reference theorists. The chapters are all written to a common template. The introductory section provides readers with a basic understanding of the theory's genesis by locating it within an intellectual tradition, paying particular attention to the historical and political context. The second section elaborates on the theory as formulated by the selected reference theorist. After this account of the theory's core elements, the third section turns to theoretical variations, examining conceptual subdivisions and overlaps, further developments and internal critique. The fourth section scrutinizes the main criticisms emanating from other theoretical perspectives and highlights points of contact with recent research in IR. The fifth and final section consists of a bibliography carefully compiled to aid students further learning. Encompassing a broad range of mainstream traditional theories as well as emerging and critical perspectives, this is an original and ground breaking textbook for students of International Relations. The German edition of the book won the Geisteswissenschaften International Prize, collectively awarded by the Fritz Thyssen Foundation, the German Federal Foreign Office and the German Publishers Booksellers Association.

Security Webs and 21st Century Threats Isaac M. Castellano, 2025-08-29 This book introduces a new framework of Security Webs which unifies the traditional state security approach with the human security approach and applies this framework to emerging security concerns in the 21st century. Security Webs offers a framework to examine security threats, responses and second and third order consequences across a range of actors and the structure to draw in existing findings. Theories and other frameworks into a universal and holistic approach to security. At its core, it clarifies the interconnected nature of security across time and space. Borrowing the concept of food webs from the field of ecology which maps out how animals and plants gain energy and food

the Security Webs framework allows for an examination of the security of an actor be it a nation state non state actor or an individual where each actor gains strength and security but likewise is also threatened The book profiles several of the emerging security threats and illustrates how the Security Webs framework can help us study these these threats include climate change weak state capacity and political extremism which all pose significant threats to states non state actors and individuals alike Bridging the divide between the traditionalist and the human security camps the book embraces the complexity that not only is international security and offers a framework applicable to every actor but also when applied creates a clear picture of security threats and arrangements This book will be of interest to students of security studies human security environmental security and International Relations
