Written Reliquaries Leslie K. Arnovick, 2006-12-20 Written Reliquaries The resonance of orality in medieval English texts establishes the linguistic component of orality and oral tradition The relics it examines are traces of spoken performance artifacts of linguistic and cultural processes Seven case studies animate verbal acts of making promises quoting proverbs pronouncing curses speaking gibberish praying Pater Nosters invoking saints and keeping silence The study of their resonance is enabled by a methodological conjunction of historical pragmatics and oral theory Insights from oral theory enlighten spoken traditions which in turn may be understood in the larger historical pragmatic context of linguistic performance The inquiry ranges across broad as well as narrow planes of reference to trace a complex set of cultural and linguistic interactions In this way it reconstructs relevant discursive contexts giving detailed accounts of underlying assumptions traditions and conventions Doing so the book demonstrates that an integrated methodology not only allows access to oral discourse in both Old English and Middle English but also provides insight into the fluid medieval interchange of literacy and orality

Measurement Error in Longitudinal Data Alexandru Cernat, Joseph W. Sakshaug, 2021-03-18 Longitudinal data is essential for understanding how the world around us changes Most theories in the social sciences and elsewhere have a focus on change be it of individuals of countries of organizations or of systems and this is reflected in the myriad of longitudinal data that are

being collected using large panel surveys This type of data collection has been made easier in the age of Big Data and with the rise of social media Yet our measurements of the world are often imperfect and longitudinal data is vulnerable to measurement errors which can lead to flawed and misleading conclusions Measurement Error in Longitudinal Data tackles the important issue of how to investigate change in the context of imperfect data It compiles the latest advances in estimating change in the presence of measurement error from several fields and covers the entire process from the best ways of collecting longitudinal data to statistical models to estimate change under uncertainty to examples of researchers applying these methods in the real world This book introduces the essential issues of longitudinal data collection such as memory effects panel conditioning or mere measurement effects the use of administrative data and the collection of multi mode longitudinal data It also presents some of the most important models used in this area including quasi simplex models latent growth models latent Markov chains and equivalence DIF testing Finally the use of vignettes in the context of longitudinal data and estimation methods for multilevel models of change in the presence of measurement error are also discussed

Humankind Andreas Höfele, Stephan Laqué, 2011-05-04 Anthropology is a notoriously polysemous term Within a continental European academic context it is usually employed in the sense of philosophical anthropology and mainly concerned with exploring concepts of a universal human nature By contrast Anglo American scholarship almost exclusively associates anthropology with the investigation of cultural and ethnic differences cultural anthropology How these two main traditions and their derivations such as literary anthropology historical anthropology ethnology ethnography intercultural studies relate to each other is a matter of debate Both however have their roots in the path breaking changes that occurred within sixteenth and early seventeenth century culture and scientific discourse It was in fact during this period that the term anthropology first acquired the meanings on which its current usage is based The Renaissance did not invent the human But the period that gave rise to humanism witnessed an unprecedented diversification of the concept that was at its very core The question of what defines the human became increasingly contested as new developments like the emergence of the natural sciences religious pluralisation as well as colonial expansion were undermining old certainties The proliferation of doctrines of the human in the early modern age bears out the assumption that anthropology is a discipline of crisis seeking to establish sets of common values and discursive norms in situations when authority finds itself under pressure
