Approaches to Natural Language Formalism Frank Morawietz,2008-08-22 This book presents a unified formal approach to various contemporary linguistic formalisms such as Government Binding Minimalism or Tree Adjoining Grammar Through a careful introduction of mathematical techniques from logic automata theory and universal algebra the book aims at graduate students and researchers who want to learn more about tightly constrained logical approaches to natural language syntax Therefore it features a complete and well illustrated introduction to the connection between declarative approaches formalized in monadic second order logic MSO and generative ones formalized in various forms of automata as well as of tree grammars Since MSO logic on trees yields only context free languages and at least the last two of the formalisms mentioned above clearly belong to the class of mildly context sensitive formalisms it becomes necessary to deal with the problem of the descriptive complexity of the formalisms involved in another way The proposed genuinely new two step approach overcomes this limitation of MSO logic while still retaining the desired tightly controlled formal properties *New Directions for Intelligent Tutoring Systems* Ernesto Costa,2012-12-06 This book is a result of the NATO Advanced Research Workshop on New Directions for Intelligent Tutoring Systems held in Sintra Portugal October 6 10 1990 The main idea behind the workshop was to bring together scientists with different concerns about Intelligent Tutoring Systems ITS in order to discuss the positive and negative aspects of the current architecture paradigm expert module student module instructional module and interface module and eventually propose some modifications or radical changes to it This was a consequence of the increasing malaise felt currently by researchers in the area of artificial intelligence and education and in particular by those concerned with ITS One symptom of this state of affairs is the fact that people have started talking about Intelligent Learning Environments ILE instead of ITS To understand the reasons for this situation we promoted the discussion of questions like To what extent do we need the technology of expert systems in ITS Which other relevant AI techniques and methodologies are urgently needed Is ITS a tool for knowledge communication or is it rather a belief system How can the research already done on interactions among agents be utilized Is it possible to find a formal theory to describe and solve the current problems with ITS The book contains the revised versions of the papers presented at the workshop The new texts reflect the discussions that took place at the meeting
