Computational Structural Biology: Methods And Applications Torsten Schwede, Manuel C Peitsch, 2008-05-02

Computational structural biology has made tremendous progress over the last two decades and this book provides a recent and broad overview of such computational methods in structural biology. It covers the impact of computational structural biology on protein structure prediction methods, macromolecular function and protein design and key methods in drug discovery. It also addresses the computational challenges of experimental approaches in structural biology. In addition to reviewing the current state of computational structural biology, each chapter ends with a brief visionary discussion on the future outlook whereby the main challenges for the coming years are elucidated. Written by an international panel of expert contributors, this book can serve as a reference manual for students and practitioners alike. Methods in Methane

Metabolism, Part A Amy Rosenzweig, Stephen W. Ragsdale, 2011-05-11. Produced by microbes on a large scale, methane is an important alternative fuel as well as a potent greenhouse gas. This volume focuses on microbial methane metabolism, which is central to the global carbon cycle. Both methanotrophy and methanogenesis are covered in detail. Topics include isolation and classification of microorganisms, metagenomics approaches, biochemistry of key metabolic enzymes, gene regulation and genetic systems, and field measurements. The state-of-the-art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field. Chemistry Division Annual Progress Report for Period Ending November 1, 1975, 1976 Theory and Applications of the Empirical Valence Bond Approach Fernanda Duarte, Shina Caroline Lynn Kamerlin, 2017-02-10. A comprehensive overview of current empirical valence bond (EVB) theory and applications, one of the most powerful tools for studying chemical processes in the condensed phase and in enzymes. Discusses the application of EVB models to a broad range of molecular systems of chemical and biological interest, including reaction dynamics, design of artificial catalysts, and the study of complex biological problems. Edited by a rising star in the field of computational enzymology. Foreword by Nobel laureate Arieh Warshel, who first developed the EVB approach. **Non-Traditional Stable Isotopes** Fang-Zhen Teng, James Watkins, Nicolas Dauphas, 2017-03-06. The development of multi-collector inductively coupled plasma mass spectrometry (MC-ICPMS) makes it possible to precisely measure non-traditional stable isotopes. This volume reviews the current status of non-traditional isotope geochemistry from analytical, theoretical, and experimental approaches to analysis of natural samples. In particular, important applications to cosmochemistry, high-temperature geochemistry, low-temperature geochemistry, and geobiology are discussed. This volume provides the most comprehensive review on non-traditional isotope geochemistry for students and researchers who are interested in both the theory and applications of non-traditional stable isotope geochemistry. **Journal of the American Chemical Society** American Chemical Society, 1922.
