Triggers Anne Breitbarth,Henk van Riemsdijk,2008-08-22 The concept of trigger is a core concept of Chomsky s Minimalist Program The idea that certain types of movement are triggered by some property of the target position is at least as old as the notion that the movement of noun phrases to the subject position is triggered by their need to receive nominative case In more recent versions of syntactic theory triggering mechanisms are thought to regulate all of movement Furthermore a quite narrow range of triggering mechanisms is permitted As is to be expected such a restrictive approach meets a variety of difficulties Specifically the question is whether all triggering elements required to cover displacement of all kinds in natural language can be independently motivated Further how can a trigger theory which crucially relies on the idea that all movement is obligatory deal with apparently optional movement processes Are features an adequate means to express the triggering function in all cases More radically are all movement phenomena really the result of the checking of trigger features And what about apparent triggering factors that are external to syntax such as prosody can they be captured in a rigid trigger theory In other words could certain aspects of triggered movement be due to interface conditions Such is the range of questions addressed by the fourteen contributions to this book They cover a considerable range of languages including Afrikaans Breton Bulgarian Dutch English French German Gungbe Hungarian Italian Japanese Kiswahili Romanian These papers present materials both empirical and theoretical that will not fail to have considerable impact on the further development of the concept of trigger in syntactic theory **Praxis historiarum.
