handling analytical and interpretive options for operational management of natural or engineered system providing comprehensive coverage that meets the needs of researchers practitioners and students      René Descartes's Natural Philosophy and Particular Bodies Fabrizio Baldassarri,2024-01-01 This book explores Ren Descartes s attempts to describe particular bodies such as rocks minerals metals plants and animals within the mechanistic interpretation of nature of his philosophical program Despite his early rationalistic epistemology Descartes s increasing attention to collections histories lists of qualities and particular bodies results in a puzzling short history of all natural phenomena contained in the Principles of philosophy 1644 The present book outlines the role of Descartes s observations and experimentation as he aimed to construct a universal science of nature ultimately revealing the mechanization of nature in detail and for curious bodies such as the Bologna Stone or the sensitive herb What results is a theoretical natural history consistent with the mechanical principles of his philosophy ultimately shedding new light on his attempt to produce a complete philosophy of nature

**Locke's Metaphysics** Matthew Stuart,2013-07-18 Though John Locke set out to write a book that would resolve questions about the origin and scope of human knowledge his Essay Concerning Human Understanding is also a profound contribution to metaphysics full of arguments about the fundamental features of bodies the notions of essence and kind the individuation of material objects personal identity the nature and scope of volition freedom of action freedom of will and the relationship between matter and mind Matthew Stuart examines a broad range of these arguments and explores the relationships between them He offers fresh interpretations of such familiar material as the distinction between primary and secondary qualities and Locke s account of personal identity and he also takes us deeper into less familiar territory including Locke s case against materialism and his philosophy of action Locke s Metaphysics shows Locke to be a more consistent systematic and interesting metaphysician than is generally appreciated It defends him against charges of muddling the definition of quality of waffling between two conceptions of secondary qualities and of vacillating in his commitment to mechanism It shows how his rejection of essentialism leads him to embrace relativism about identity and that his relativism about identity is the key to defending his account of personal identity against several objections Yet the picture of Locke that emerges is not always a familiar one Stuart s account reveals that he is a philosopher who denies the existence of relations who takes bodies to be colored only so long as we are looking at them and who is not committed to mechanism He shows that Locke takes persons to be three dimensional beings whose pasts are gappy rather than continuous Finally he shows that Locke is a volitionist who holds that we can will only our own thoughts and bodily motions and not such episodes as lighting a candle or turning the pages of a book      **Natural Product Extraction** Mauricio A Rostagno,Juliana M Prado,2015-10-09 Natural products are sought after by the food pharmaceutical and cosmetics industries and research continues into their potential for new applications Extraction of natural products in an economic and environmentally friendly way is of high importance to all industries involved This book presents a holistic and in depth view of the techniques available for extracting

natural products with modern and more environmentally benign methods such as ultrasound and supercritical fluids discussed alongside conventional methods Examples and case studies are presented along with the decision making process needed to determine the most appropriate method Where appropriate scale up and process integration is discussed Relevant to researchers in academia and industry and students aiming for either career path Natural Product Extraction presents a handy digest of the current trends and latest developments in the field with concepts of Green Chemistry in mind
