Distributed Computing and Internet Technology Goutam Chakraborty, 2005-12-09 The opening ceremony and pre conference tutorials on various related topics were held on December 21 The technical program started on

December 22 and continued for three days The program was arranged in single track so as to enable participants to attend sessions of different tracks Papers from the DM IT SE and SS tracks were divided into two sessions whereas DC track sessions were held on the first two days of the conference The program also included two plenary talks The first talk was delivered by S S Iyengar from Louisiana State University USA The second talk was delivered by He Jifeng from the International Institute for Software Technology IIST Macau Prof Iyengar's talk on The Distributed Sensor Networks An Emerging Technology was focused on new ideas about the use of distributed systems for emerging technology while Prof Jifeng's talk on Linking Theories of Concurrency by Retraction dealt with semantics of concurrency All the conference committee members contributed towards the success of ICDCIT 2005 And it was a pleasant experience for me to work with them The one name that sticks out is R K Ghosh Steering Committee Chair He really steered the group with his past experience as Program Chair of ICDCIT 2004 Slope Stability Analysis and Stabilization Y. M. Cheng, C. K. Lau, 2008-06-03 A number of methods currently exist for the analysis and design of slopes This book provides a critical review of these and offers several more appropriate approaches for overcoming numerical convergence and the location of critical failure surfaces in two dimensional and three dimensional cases New concepts in three dimensional stability analysis finite element analysis and the extension of slope stability problems to lateral earth pressure problems are also addressed It gives helpful practical advice and design resources in the form of recommendations for good analysis and design practice design charts and tables for the engineer Limitations are detailed of both limit equilibrium and the finite element method in the assessment of the stability of a slope and guidance is provided for assessing the fundamental assumptions and limitations of stability analysis methods and computer modelling The book provides ample examples to illustrate how this range of problems should be dealt with The final chapter touches on design and its implementation on site The emphasis is on the transfer of the design to its physical implementation on site in a holistic way taking full account of the latest developments in construction technology Engineering and construction problems tend to be pigeonholed into different classes of problem such as slope stability bearing capacity and earth pressure behind retaining structures This is quite unnecessary This book offers a unified approach which is conceptually practically and philosophically more satisfying *Tryptophan, Serotonin, and Melatonin* Gerald Huether, Walter Kochen, Thomas J. Simat, Hans Steinhart, 2012-12-06 This volume contains the proceedings of the Ninth Meeting of the International Study Group for Tryptophan Research ISTRY held at the University of Hamburg Germany from October 10 to 14 1998 At this meeting the recent developments in the field of tryptophan research were presented by leading researchers from all over the world in 81 oral and 48 poster contributions Research on tryptophan and its derivatives provides an inexhaustible subject At the conference we tried to compose a multifaceted picture of the recent investigations through contributions from the major disciplines involved Thus we tried to strike a balance between basic research topics and clinical nutritional or industrial applications We offered workshops on tryptophan in sleep and mood

melatonin IDO activation and the eosinophilia myalgia syndrome EMS as a platform for intensive discussion for the participants In these proceedings many contributions are multidisciplinary and have practical or theoretical implications for different research fields Hence we have organized this volume in nine main chapters according to basic disciplines and subjects We are aware that this classification is artificial but we hope that it is the best compromise for contributors and readers

FPGA-BASED Hardware Accelerators Ioulia Skliarova, Valery Sklyarov, 2019-05-30 This book suggests and describes a number of fast parallel circuits for data vector processing using FPGA based hardware accelerators Three primary areas are covered searching sorting and counting in combinational and iterative networks These include the application of traditional structures that rely on comparators swappers as well as alternative networks with a variety of core elements such as adders logical gates and look up tables The iterative technique discussed in the book enables the sequential reuse of relatively large combinational blocks that execute many parallel operations with small propagation delays For each type of network discussed the main focus is on the step by step development of the architectures proposed from initial concepts to synthesizable hardware description language specifications Each type of network is taken through several stages including modeling the desired functionality in software the retrieval and automatic conversion of key functions leading to specifications for optimized hardware modules The resulting specifications are then synthesized implemented and tested in FPGAs using commercial design environments and prototyping boards The methods proposed can be used in a range of data processing applications including traditional sorting the extraction of maximum and minimum subsets from large data sets communication time data processing finding frequently occurring items in a set and Hamming weight distance counters comparators The book is intended to be a valuable support material for university and industrial engineering courses that involve FPGA based circuit and system design
