The SAGE Encyclopedia of Quality and the Service Economy Su Mi Dahlggaard-Park, 2015-05-29 Society globally has entered into what might be called the service economy Services now constitute the largest share of GDP in most countries and provide the major source of employment in both developed and developing countries Services permeate all aspects of

people's lives and are becoming inseparable from most aspects of economic activity. Quality management has been a dominating managerial practice since World War II. With quality management initially associated with manufacturing industries, one might assume the relevance of quality management might decrease with the emergence of the service economy. To the contrary, the emergence of the service economy strengthened the importance of quality issues, which no longer are associated only with manufacturing industries but are increasingly applied in all service sectors as well. Today we talk not only about product or service quality but have even expanded the framework of quality to quality of life and quality of environment. Thus, quality and services have emerged in parallel as closely interrelated fields. The Encyclopedia of Quality and the Service Economy explores such relevant questions as: What are the characteristics, nature, and definitions of quality and services? How do we define quality of products, quality of services, or quality of life? How are services distinguished from goods? How do we measure various aspects of quality and services? How can products and service quality be managed most effectively and efficiently? What is the role of customers in creation of values? These questions and more are explored within the pages of this two-volume A to Z reference work.

The Road to Quality Control Nicholas Fisher, Yutaka Tanaka, William Woodall, 2019-01-14. Professor Woodall's essay shows that this book represents a remarkable contribution even by today's standards because of its contemporary thinking about the relationship between the specific topic of SQC and the broader company context of Quality Management. It also demonstrates the remarkable awareness of at least some young US engineers in the post-war period about the vital role of Statistical Quality Control in establishing and maintaining a competitive position. The book reveals that there was unsuspected knowledge extant immediately post-war about the importance of Statistical Quality Control when appropriately applied in an industrial setting. It also helps to correct wide-spread historical misconceptions about who specifically was responsible for helping Japanese industry get back on its feet post-war, a task assigned to General Douglas MacArthur by President Truman, and how MacArthur was indebted to Sarasohn

There is no doubt that quality has become a major feature in the survival plan of organisations With diminishing markets resulting from improved competitive performance and the associated factor of single sourcing arrangements by the major organisations it is clear that unless there is a commitment to change organisations will lose their competitive edge This will unfortunately mean elimination and the resultant harsh realities that come with it for the employees It has been said on many platforms that unemployment is not inevitable Those organisations which recognise the requirements for survival know that quality and its association with customer satisfaction is now a key issue Survival programmes based on quality improvement require an unrelenting commitment to include everyone from the Managing Director down in an ongoing never ending involvement based on monitoring and improving all our activities These Total Quality Management TOM programmes

whatever their specific nature have a common theme of measuring and then improving This text describes the philosophy and techniques of one type of involvement programme Statistical Process Control SPC The material to follow suggests that SPC is a major element of any programme and if properly applied could be a complete programme in itself Measuring and improving means that data must be collected used understood interpreted and analysed and thereby lies the difficulty
