Modeling Uncertainty with Fuzzy Logic Asli Celikyilmaz, I. Burhan Türksen, 2009-04-01 The world we live in is pervaded with uncertainty and imprecision. Is it likely to rain this afternoon? Should I take an umbrella with me? Will I be able to find parking near the campus? Should I go by bus? Such simple questions are a common occurrence in our daily lives. Less simple examples: What is the probability that the price of oil will rise sharply in the near future? Should I buy Chevron stock? What are the chances that a bailout of GM, Ford and Chrysler will not succeed? What will be the consequences? Note that the examples in question involve both uncertainty and imprecision. In the real world this is the norm rather than exception. There is a deep seated tradition in science of employing probability theory and only probability theory to deal with uncertainty and imprecision. The monopoly of probability theory came to an end when fuzzy logic made its debut. However, this is by no means a widely accepted view. The belief persists especially within the probability community that probability theory is all that is needed to deal with uncertainty. To quote a prominent Bayesian Professor Dennis Lindley: The only satisfactory description of uncertainty is probability.
