The Last Book John Williams, 2007-08-27 There have been many attempts to explain life For the most part they are variants on a religious or mystical theme These provide a purpose to life but not the purpose of life A full rational explanation of our existence based on our rapidly accumulating scientific knowledge has eluded us until now The explanation of life which is offered in this book draws on three main components evolution genetics and psychology However something exists in our mind which stops us from seeing clearly what is already before us Once this block is removed we can view life objectively and see it as a special form of information which has arisen through evolution Information is identified as the unifying entity of the universe which is inherent in the spatial arrangement of matter This book relates these findings to our world and our lives It sets out in rational terms where we came from how we got here and finally reveals our destiny www.thelastbook.co.uk

THE LAST NAZI Carl Hiltbrand,2005-01-14 Germany in 1930 is in a state of chaos The terms of the Treaty of Versailles force Germany to pay reparations that are bleeding the country dry The political climate is ripe for a revolution The people feel a mixture of hatred hopelessness and despondency ADOLPH HITLER is about to step onto the world stage to lead the country out of the oppressive situation HAROLD ANDERSON and his wife MARY who is seven months pregnant with what she believes is one child arrive in Bremerhaven Germany from the United States during that bleak year Unknowingly the Andersons are thrust into a political cauldron which will affect their lives forever Mary s labor pains start unexpectedly One twin son is born as Mary faints from pain and exhaustion Another identical twin son is delivered by the German doctor using caesarean surgery while Mary is still unconscious Unknown to the parents he is taken immediately to a German specialist EMIL VON HOFFEN who saves his life but plans to secretly separate him from his twin brother and American parents Harold and Mary are never made aware of their second child and they return to the United States The second twin is adopted by Doctor von Hoffen who plans to use him along with other sets of twins in experiments to develop the perfect Aryan German Eric von Hoffen the German twin is raised as a Nazi youth At age fifteen Eric is honored by Hitler personally He becomes part of the elite guard force at the Fuherbunker in Berlin near the final end of the Third Reich Eric actually witnesses the burial and burning of the corpses of Adolph Hitler and EVA BRAUN Meanwhile in the United States Harold Jr while in college rescues a girl DONNA COX from the influence of the worst of the night world prostitution The brown haired beauty and Harold fall in love and marry following his graduation from the University Their idyllic life is interrupted when Harold Jr is drafted into the military in early 1953 during the Korean War He is shipped to West Germany where he discovers the existence and identity of his twin brother and the intrigue that led to the separation of the twins at their birth It is now 1988 Harold Anderson Jr is voted president elect of the United States Eric plots the kidnapping of his brother and is successful in usurping the presidency The deception fails later when Harold is rescued and confronts his brother in the oval office of the White House All the indoctrination and brainwashing by the Nazis during his youth could not blot the love von Hoffen held secretly for his brother all those years He perhaps did not realize it himself as he made the instantaneous decision to leap in front of a bullet meant for his brother In a climactic scene near the end the president holds his dying brother in his arms as life ebbs from him As Abel would have forgiven Cain I forgive my brother He was a casualty of a ruthless society and belief Let s hope he truly is the last Nazi

Genetic Reconstruction of the Past Henry A. Erlich,2024 Genetic Reconstruction of the Past describes how DNA analysis can be used to make inferences not only in criminal cases but also about the ancient past Part One focuses on forensic genetics and crime scenes It gives an in depth account of how we developed PCR and used it on DNA evidence for the first time in a US court case in 1986 the first post

conviction exoneration and the first identification of a missing person Part Two discusses how the same DNA technology and data can also illuminate the ancient past the history of human origins and migrations

Recent Theories of Human Development R. Murray Thomas, 2001 Intended as supplemental reading in courses on theories of development this book augments traditional core texts by providing students with more depth on about two dozen recent and emerging theories that have appeared over the past 20 years This period has seen a decline of the traditional grand theories that attempt to apply to all people all the time in favor of micro theories that focus more on individual differences so a book like this actually points the way toward the future rather than dryly reviewing the past In addition the author inspects the changing ways in which the concept of theory itself has been interpreted during this period and he concludes with a chapter suggesting future directions

Recent advances in genomic and genetic studies in the Archaea Frank T. Robb, Todd M. Lowe, Zvi Kelman, The accumulation of archaeal genomes has lagged significantly behind the Bacteria however in the last several years the coverage of the major phyla of Archaea has been significantly improved There are now multiple genomes in several important genera such as *Pyrobaculum* *Sulfolobus* *Thermococcus* *Pyrococcus* *Halobacterium* *Methanosarcina* *Methanopyrus* and *Methanocaldococcus* Comparative genomic studies are now under way and in many cases there are several consortial multilaboratory groups such as the SulfoSys community which have started to break into new systems biology initiatives At the same time access to streamlined genetic approaches in the genera *Sulfolobus* *Thermococcus* *Methanosarcina* and *Halobacterium* *Haloferax* has improved significantly and is leveraging the genomic information in the Archaea The result has been that genome driven studies of metabolism DNA replication and repair transcription and translation and posttranslational processing have become more detailed and that basic research findings are burgeoning The areas of global gene regulation the roles of small RNAs and mechanisms of transcription and DNA replication will be focus areas in the guidelines of this Research Topic Recently insights into the unique characteristics of archaeal transcription and the ability to study the effects of mutation in vivo following knock in gene replacement have resulted in incisive findings

Advanced Gene Delivery Alain Rolland, 2003-09-02 A practical resource for everyone involved in the gene therapy field and in the design of effective gene delivery systems this volume presents an overview and update of recent advances in the field of non viral methods for the in vivo transfer of therapeutic genes to biological targets using conventional routes of administration Methods to control the spatial and temporal modulation of gene function in vivo as well as the level duration specificity and fidelity of gene expression are described The rational design and the applications of a variety of non viral gene delivery systems such as cationic lipid polymer and poly peptide based systems are exemplified for the control of location of therapeutic genes administered by various routes Current and potential clinical applications of gene based medicines are presented for the prevention correction or modulation of diseases Examples of current applications of plasmid based systems for genetic vaccination treatment of genetic disorders such as cystic fibrosis and treatment of acquired diseases such as

cancer are also provided **Lewin's GENES X** Jocelyn E. Krebs, Elliott S. Goldstein, Stephen T. Kilpatrick, 2009-11-27

An Introduction to Systems Biology Uri Alon, 2019-07-12 Praise for the first edition superb beautifully written and organized work that takes an engineering approach to systems biology Alon provides nicely written appendices to explain the basic mathematical and biological concepts clearly and succinctly without interfering with the main text He starts with a mathematical description of transcriptional activation and then describes some basic transcription network motifs patterns that can be combined to form larger networks Nature This text deserves serious attention from any quantitative scientist who hopes to learn about modern biology It assumes no prior knowledge of or even interest in biology One final aspect that must be mentioned is the wonderful set of exercises that accompany each chapter Alon's book should become a standard part of the training of graduate students Physics Today Written for students and researchers the second edition of this best-selling textbook continues to offer a clear presentation of design principles that govern the structure and behavior of biological systems It highlights simple recurring circuit elements that make up the regulation of cells and tissues Rigorously classroom tested this edition includes new chapters on exciting advances made in the last decade Features Includes seven new chapters The new edition has 189 exercises the previous edition had 66 Offers new examples relevant to human physiology and disease The book website including course videos can be found here <https://www.weizmann.ac.il/mcb/UriAlon/introduction>

systems biology design principles biological circuits Frontiers in Algorithmics Mingyu Xiao, Frances Rosamond, 2017-06-14 This book constitutes the proceedings of the 11th International Workshop on Frontiers in Algorithmics FAW 2017 held in Chengdu China in June 2017 The 24 papers presented in this volume were carefully reviewed and selected from 61 submissions They deal with all aspects of theoretical computer science and algorithms **The Inconstant Gene** Lawrence Dillon, 2013-11-11 Why should the gene be suggested to be inconstant when the contrary view that gene structure is invariant except through mutagenic processes induced by potent external factors has long been a universal doctrine of genetics Indeed during the early part of the present century before mutation was recognized as being of general occurrence the seeming unvarying nature of the gene led to skepticism regarding the validity of the evolutionary theory only later could the origins of the morphological differences between individuals and species be attributed to a combination of mutation and evolution involving natural forces selecting between favorable and unfavorable genetic changes But during the past several decades as knowledge of the macromolecular constitution of organisms has increased to the point where even the primary structures of the genes themselves are being revealed on a routine basis it has become increasingly difficult to ascribe all the resulting observations to ordinary mutagenesis and natural selection Some more profound mechanism often seems to be present that influences both the constancy and inconstancy of the genes an apparatus whose existence this study hopes to reveal In seeking to demonstrate the universality of this mechanism data are sought through the numerous activities of organisms of many types wherever gene action changes are manifest **Development and Reproduction in Humans and Animal Model Species** Werner A. Mueller, Monika Hassel, Maura Grealy, 2015-01-03 This book describes human development including sexual reproduction and stem cell research with the development of model organisms that are accessible to genetic and experimental analysis in readily understandable texts and 315 multi colored graphics The introductory account of model organisms selected from the entire animal kingdom presents general principles which are then outlined in subsequent chapters devoted to for example sexual development genes controlling development and their contemporary molecular analysis methods production of clones and transgenic animals development of the nervous and circulatory systems regenerative medicine and ageing Finally the evolution of developmental toolkits and novelties is discussed including the genetic basis of the enlargement of the human forebrain Separate boxes are devoted to controversial questions such as the benefits and problems of prenatal diagnostics or the construction of ancient body plans *Current Research in Embryology* Sabine Globig, 2011-04-15 Embryology the study of embryos is the branch of biological science that examines the formation and early development of an individual organism from fertilization of the egg ovum to birth This collection of articles by embryology experts discusses research on some of the most important topics in embryology today Topics include the cryopreservation of human embryos in vitro generation of neurons from embryonic stem cells embryonic transfer transcriptional profiling and more Artificial Neural Nets and Genetic Algorithms David W. Pearson, Nigel C.

Steele, Rudolf F. Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are subjects of the contributions to this volume There are contributions reporting successful applications of the technology to the solution of industrial commercial problems This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm Theoretical issues also receive attention notably in connection with the radial basis function neural network Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers These techniques are also used extensively for combinatorial optimisation problems

Hybrid Artificial Intelligent Systems Emilio Corchado, 2011-05-16 The two LNAI volumes 6678 and 6679 constitute the proceedings of the 6th International Conference on Hybrid Artificial Intelligent Systems HAIS 2011 held in Wroclaw Poland in May 2011 The 114 papers published in these proceedings were carefully reviewed and selected from 241 submissions They are organized in topical sessions on hybrid intelligence systems on logistics and intelligent optimization metaheuristics for combinatorial optimization and modelling complex systems hybrid systems for context based information fusion methods of classifier fusion intelligent systems for data mining and applications systems man and cybernetics hybrid artificial intelligence systems in management of production systems habrid artificial intelligent systems for medical applications and hybrid intelligent approaches in cooperative multi robot systems
