stress disorder This makes a greater understanding of stimulant dependence among the psychiatric community an integral part of providing effective evaluation and treatment Cocaine and Methamphetamine Dependence provides An introduction of the DSM 5 plan to drop the distinction between abuse and dependence and add craving as a criterion An overview of how the epidemiology of stimulant abuse is changing and pharmaceutical abuse is rising due to factors such as greater availability through family and friends who are increasingly being prescribed stimulants for conditions like weight loss or attention deficit disorder The insight that even after long abstinence stimulant users may remain vulnerable to amphetamine induced psychosis with delusions paranoia and compulsive behavior The insight that a comprehensive assessment of the patient involves the management of aberrant behaviors such as intoxication violence suicide impaired cognitive function and uncontrolled affective displays A focus on treatment emphasizing that the most important component of stimulant treatment involves behavioral therapies often in combination with adjunctive medications A review of the criminal justice system s shift away from punitive action and towards more human treatment including the far reaching benefits of medical management and treatment Fortunately our understanding of stimulant abuse and dependence is growing at a time when a steady stream of new users and casualties is still accumulating Constant vigilance regarding changes in epidemiology fluctuations in drug availability and changes in drug trafficking patterns are essential to recognition of new drug abuse patterns and their identification and treatment Cocaine and Methamphetamine Dependence should be on the bookshelf of residents physicians and psychiatrists who are highly likely to come into contact with one of the millions using and abusing stimulants today
