English patent system and its relationship with technical change during the period between 1660 and 1800 when the patent system evolved from an instrument of royal patronage into one of commercial competition among the inventors and manufacturers of the Industrial Revolution It analyses the legal and political framework within which patenting took place and gives an account of the motivations and fortunes of patentees who obtained patents for a variety of purposes beyond the simple protection of an invention It includes the first in depth attempt to gauge the reliability of the patent statistics as a measure of inventive activity and technical change in the early part of the Industrial Revolution and suggests that the distribution of patents is a better guide to the advance of capitalism than to the centres of inventive activity It also queries the common assumption that the chief goal of inventors was to save labour and examines contemporary criticism of the patent system in the light of the changing conceptualisation of invention among natural scientists and political economists

Limited Livelihoods Sonya O. Rose, 2003-09-02 Integrating analytical tools from feminist theory cultural studies and sociology to illuminate detailed historical evidence Sonya Rose argues that gender was a central organizing principle of the nineteenth century industrial transformation in England She elaborates a cultural theory of gender that suggests why it is an inherent aspect of all social and economic relations Analysing employer strategies and state policies and the role of work in family life she demonstrates that neither industrial transformation nor class relations can be understood when reduced to gender neutral and abstract forces
