Culture and the Social Context of Health Inequalities Carol L. Mansyur, 2006 There has been a great deal of interest and debate recently concerning the linkages between inequality and health cross nationally Exposures to social and health inequalities likely vary as a consequence of different cultural contexts It is important to guide research by a theoretical perspective that includes cultural and social contexts cross nationally If inequality affects health only under specific cultural conditions this could explain why some of the literature that compares different societies finds no evidence of a relationship between inequality and health in certain countries A theoretical framework is presented that combines sociological theory with constructs from cultural psychology in order to identify pathways that might lead from cultural dimensions to health inequalities Three analyses are carried out The first analysis explores whether there is a relationship between cultural dimensions at the societal level and self rated health at the individual level The findings suggest that different cultural norms at the societal level can produce both social and health inequalities but the effects on health may differ depending on the socio cultural context The second analysis tests the hypothesis that health is affected by the density of social networks in a society levels of societal trust and inequality The results suggest that commonly used measures of social cohesion and inequality may have both contextual and compositional effects on health in a large number of countries and that societal measures of social cohesion and inequality interact with individual measures of social participation trust and income moderating their effects on health The third analysis explores whether value systems associated with vertical individualist societies may lead to health disparities because of their stigmatizing effects I test the hypothesis that within vertical individualist societies subjective well being will be affected by a social context where competition and the Protestant work ethic are valued mediated by inequality The hypothesis was not supported by the available cross national data most likely because of inadequate measures missing data and the small sample of vertical individualist countries The overall findings demonstrate that cultural differences are important contextual factors that should not be overlooked when examining the causes of health inequalities

Malcolm,Parissa Safai,2012 The Social Organization of Sports Medicine is the first book length overview of the social scientific study of sports medicine drawing together work from an international cadre of scholars who examine and provide interdisciplinary analysis of the dynamic and multi faceted relationships between sports and medicine and within sports medicine The book charts changing perceptions of sport within medical discourse attempts by sports medicine providers to forge professional identities in response to these processes the day to day experiences of deliverers of sports medicine and the reactions of recipients of that healthcare The contents are organized in four sections examining the competing and changing ways in which sports medicine is conceived the ways in which it is organized the ways in which it is practiced and points of contestation between traditional and alternative and emerging forms of sports medicine This collection of essays

consolidates recent advances in this area of study and establishes a basis for the future development of the field **Social determinants of health** Laurie Hinnant, Sara Hairgrove, Heather Kane, Jason Williams, Jessica Duncan Cance, 2022-12-12 In recent years the number of publicly available tools and indices assessing social determinants of health SDOH has grown exponentially While many of these indices have been developed to assist researchers and practitioners with identifying vulnerable communities it is difficult to determine the most appropriate measure index or combination of indices to use given the research question of interest This paper presents an overview of the most commonly included indices highlights commonalities and identifies some differences in what they measure We also discuss challenges with using these measures including the use of state level data to examine local level issues and how the use of atheoretical indices challenges the application of SDOH measurement Findings are intended to provide researchers and practitioners with information about SDOH data available through these common indices to inform how they are applied based on the needs of their work

users addressing topics such as Drugs and poverty Drugs and gender Drugs and race Drugs and territory Stigmatization of drug use Prohibitionism Given its broad and innovative approach Drugs and Social Context Social Perspectives on the Use of Alcohol and Other Drugs will be of interest for researchers clinicians and other health professionals since the study of the social aspects of drug use is central to everyone who deals with the issue **The Social Context of Coping** John

Eckenrode, 2013-12-11 I am very pleased to have been asked to do a brief foreword to this second CRISP volume The Social Context of Coping I know most of the participants and their work and respect them as first rate and influential research scholars whose research is at the cusp of current concerns in the field of stress and coping Psychological stress is central to human adaptation It is difficult to visualize the study of adaptation health illness personal soundness and psychopathology without recognizing their dependence on how well people cope with the stresses of living Since the editor John Eckenrode has portrayed the themes of each of the chapters in his introduction I can limit myself to a few general comments about stress and coping Stress research began as unexplored fields often do with very simple should I say simplistic ideas about how to define the concept Early approaches were unidimensional and input output in outlook modeled implicitly on Hooke's late 17th century engineering analysis in which external load was an environmental stressor stress was the area over which the load acted and strain was the deformation of the structure such as a bridge or building **Health and the Good**
