compulsive disorder OCD OCD was the first disorder where it was shown that both specific medications and cognitive behavioral techniques resulted in normalization of activity in particular brain structures It is now possible to provide patients with integrated treatment approaches Posttraumatic stress disorder PTSD Once viewed as a normal reaction to trauma PTSD is increasingly understood as a pathological response characterized by specific psychobiological dysfunctions Again there have been exciting advances in the treatment of this disorder with the release of the first FDA approved agents for PTSD Generalized anxiety disorder GAD For a number of years GAD was thought of as a residual disorder occasionally seen in combination with more primary conditions Nowadays we know that GAD is an independent condition that is prevalent persistent and disabling Busy residents and psychiatrists in active clinical practice psychologists primary care practitioners and other mental health professionals will find this clinical manual with its integrated approach of both pharmacotherapy and psychotherapy a valuable tool in their everyday practices   Principles and Practice of Behavioral Assessment Stephen N.
