The History of Media and Communication Research David W. Park,Jefferson Pooley,2008

Strictly speaking James Carey wrote there is no history of mass communication research This volume is a long overdue response to Carey s comment about the field s ignorance of its own past The collection includes essays of historiographical self scrutiny as well as new histories that trace the field s institutional evolution and cross pollination with other academic disciplines The volume treats the remembered past of mass communication research as crucial terrain where boundaries are marked off and futures plotted The collection intended for scholars and advanced graduate students is an essential compass for the field

Social Scientists for Social Justice John P. Jackson, Jr.,2001-11-01 In one of the twentieth century s landmark Supreme Court cases Brown v Board of Education social scientists such as Kenneth Clark helped to convince the Supreme Court Justices of the debilitating psychological effects of racism and segregation John P Jackson Jr examines the well known studies used in support of Brown such as Clark s famous doll tests as well as decades of research on race which lead up to the case Jackson reveals the struggles of social scientists in their effort to impact American law and policy on race and poverty and demonstrates that without these scientists who brought their talents to bear on the most pressing issues of the day we wouldn t enjoy the legal protections against discrimination we may now take for granted For anyone interested in the history and legacy of Brown v Board of Education this is an essential book

Economists and Societies Marion Fourcade,2009-03-09 Economists and Societies is the first book to systematically compare the profession of economics in the United States Britain and France and to explain why economics far from being a uniform science differs in important ways among these three countries Drawing on in depth interviews with economists institutional analysis and a wealth of scholarly evidence Marion Fourcade traces the history of economics in each country from the late nineteenth century to the present demonstrating how each political cultural and institutional context gave rise to a distinct professional and disciplinary configuration She argues that because the substance of political life varied from country to country people s experience and understanding of the economy and their political and intellectual battles over it crystallized in different ways through scientific and mercantile professionalism in the United States public minded elitism in Britain and statist divisions in France Fourcade moves past old debates about the relationship between culture and institutions in the production of expert knowledge to show that scientific and practical claims over the economy in these three societies arose from different elites with different intellectual orientations institutional entanglements and social purposes Much more than a history of the economics profession Economists and Societies is a revealing exploration of American French and British society and culture

as seen through the lens of their respective economic institutions and the distinctive character of their economic experts

Histories of Human Engineering Maarten Derksen, 2017-06-08 The dream of control over human behaviour is an old dream shared by many cultures This fascinating account of the histories of human engineering describes how technologies of managing individuals and groups were developed from the nineteenth century to the present day ranging from brainwashing and mind control to Dale Carnegie's art of dealing with people Derksen reveals that common to all of them is the perpetual tension between the desire to control people's behaviour and the

resistance this provokes Thus to influence other people successfully technology had to be combined with tact with a personal touch with a subtle hint or with outright deception manipulations are made palatable or invisible Combining psychological history and theory with insights from science and technology studies and rhetorical scholarship Derksen offers a fresh perspective on human engineering that will appeal to those interested in the history of psychology and the history of technology

Uncivil Rights Jonna Perrillo,2024-05-31 Almost fifty years after Brown v Board of Education a wealth of research shows that minority students continue to receive an unequal education At the heart of this inequality is a complex and often conflicted relationship between teachers and civil rights activists examined fully for the first time in Jonna Perrillo s Uncivil Rights which traces the tensions between the two groups in New York City from the Great Depression to the present While movements for teachers rights and civil rights were not always in conflict Perrillo uncovers the ways they have become so brought about both by teachers who have come to see civil rights efforts as detracting from or competing with their own goals and by civil rights activists whose aims have deprofessionalized the role of the educator Focusing in particular on unionized teachers Perrillo finds a new vantage point from which to examine the relationship between school and community showing how in this struggle educators activists and especially our students have lost out

The Future of the World Jenny Andersson,2018-07-19 The Future of the World is devoted to the intriguing field of study which emerged after World War Two futurism or futurology Jenny Andersson explains how futurist scholars and researchers imagined the Cold War and post Cold War world and the tools and methods they would

use to influence and change that world Futurists were a motley crew of Cold War warriors nuclear scientists journalists and peace activists Some argued it should be a closed sphere of science defined by delimited probabilities They were challenged by alternative notions of the future as a potentially open realm Futurism also drew on an eclectic range of repertoires some of which were deduced from positivist social science mathematics and nuclear physics and some of which sprung from alternative forms of knowledge in science fiction journalism or religion These different forms of prediction laid very different claims to how accurately futures could be known and what kind of control could be exerted over what was yet to come The Future of the World carefully examines these different engagements with the future and inscribes them in the intellectual history of the post war period Using unexplored archival collections The Future of the World reconstructs the Cold War networks of futurologists and futurists
