The Psychology of Food and Eating John L. Smith, 2001-12-05. There has long been an interest in food among psychologists across the full range of the discipline from the physiology of hunger and the psychophysics of taste and smell to the development of food preferences and the social psychology of food related behaviour and attitudes. In this new text John L. Smith takes a much needed broad view of the field bringing together physiological research, psychodynamic theory and sociological perspectives in a way that both celebrates their differences and explores their potential fusion. The Psychology of Food and Eating provides more than a dry decontextualised physiological explanation of food and eating. It moves on to enable students to see food in its wider context in terms of everyday life and real routines. It provides an overview of social scientific approaches to the study of food: biosocial, socioanthropological, structural, feminist, psychodynamic and an appreciation of the various ways that social psychological perspectives can be applied to real life contexts. With its detailed and almost confessional account of the research process students will gain an insider's perspective on how observational and idiographic techniques are deployed in practice in everyday settings. The book will prove of interest not only to students and researchers on health psychology, applied psychology and critical psychology courses but also to all those looking for a really accessible introduction to contemporary alternatives to the more conventional research techniques used in this field.

A Guide to the Psychology of Eating Leighann R. Chaffee, Stephanie P. da Silva, 2022-01-13. Why are spicy cuisines characteristic of hot climates? Does our stomach or our brain tell us when it is time to eat? And how do we decide if bugs are food? Employing a learner centered approach this introduction to the psychological mechanisms of consumption engages readers with questions and cross cultural examples to promote critical analysis and evidence based comprehension. The discipline of psychology provides an important perspective to the study of eating given the remarkable complexity of our food environments including society and culture, eating habits and relationships with food. As everything psychological is simultaneously biological, the role of evolutionary pressures and biopsychological forces are bases to explore complex processes within the book such as sensation and perception, learning and cognition and human development. The authors illuminate contemporary eating topics including the scope and consequences of overnutrition, the aetiology of eating disorders, societal focus on dieting and body image controversies in

food policy and culture inspired cuisine Supplemental resources and exercises are provided in a pedagogically focused companion website
