

# Computable General Equilibrium Models for Trade Policy Analysis in Developing Countries: A Survey

---

Jaime de Melo, *Trade Policy Division, Country Economics Department, The World Bank*

This paper surveys the contributions of computable general equilibrium (CGE) simulation models designed to quantify the implications of alternative trade policy scenarios in developing countries. The paper starts with a review of the basic structure of CGE models, using a one-sector model with product differentiation on the import and export side. The basic properties of CGE models are established and a series of applications to trade policy, internal-external balance and growth, and intertemporal issues are discussed.

## INTRODUCTION

The use of computable general equilibrium (CGE) models for policy analysis has become widespread for both developed and developing economies. For developed economies, with a few notable exceptions, applications have focused on microeconomics with the analysis concentrating on estimating the welfare impact of alternative tax structures or energy policies.<sup>1</sup> In developing countries, CGE models have been used for a wider range of issues, from medium- to long-term macroeconomic policy analysis to the more traditional microeconomic issues analyzed in developed countries as well.<sup>2</sup> Several reasons account for this wider range of applications, particularly the fact that notwithstand-

<sup>1</sup>Applications to international trade and taxation issues are surveyed in Shoven and Whalley (1984). For models with a focus on energy policies, see Hudson and Jorgenson (1978). An exception is Dixon et al. (1982), who use a CGE model for Australia to analyze a wide range of macroeconomic and microeconomic issues.

<sup>2</sup>Robinson (1988) surveys CGE applications for developing countries with an emphasis on macroeconomics and applications rather than on international trade. The two surveys are therefore complementary.

Structural Dynamics and Economic Growth Richard Arena, Pier Luigi Porta, 2012-05-03 Ever since Adam Smith economists have been preoccupied with the puzzle of economic

growth The standard mainstream models of economic growth were and often still are based either on assumptions of diminishing returns on capital with technological innovation or on endogenous dynamics combined with a corresponding technological and institutional setting An alternative model of economic growth emerged from the Cambridge School of Keynesian economists in the 1950s and 1960s This model developed mainly by Luigi Pasinetti emphasizes the importance of demand human learning and the growth dynamics of industrial systems Finally in the past decade new mainstream models have emerged incorporating technology or demand based structural change and extending the notion of balanced growth This collection of essays reassesses Pasinetti's theory of structural dynamics in the context of these recent developments with contributions from economists writing in both the mainstream and the Cambridge Keynesian traditions and including Luigi Pasinetti William Baumol Geoffrey Harcourt and Nobel laureate Robert Solow

**On the Reliability of Economic Models** Daniel Little,2012-12-06 This volume represents a contribution to the philosophy of economics with a distinctive point of view the contributors have selected particular areas of economics and have probed these areas for the philosophical and methodological issues that they raise The primary essays

are written by philosophers concentrating on philosophical issues that arise at the level of the everyday theoretical practice of working economists. Commentary essays are provided by working economists responding to the philosophical arguments from the standpoint of their own disciplines. The volume thus represents something of an experiment in the philosophy of science striving as it does to explore methodological issues across two research communities. The purpose of the volume is very specific to stimulate a discussion of the epistemology and methodology of economics that works at the level of detail of existing best practice in economics today. The contributors have designed their contributions to stimulate productive conversation between philosophers and economists on topics in the methodology of economics.

*The Impact of Trade and Domestic Policy Reforms in India* Rajesh Chadha, Alan Verne Deardorff, Sanjib Pohit, Robert Mitchell. Stern, 2010-08-27. Major economic reforms undertaken since 1991 have brought the Indian economy into a new phase of development directed toward becoming globally competitive through the opening of trade, foreign investment and technology inflows. The private sector is expected to play a lead role with a corresponding reduction in the role played by the public sector. This book is aimed at analyzing the comparative static effects of selected post 1991 trade and domestic policy reforms on trade, factor prices, economic welfare and the intersectoral allocation of resources. The study relies on a computable general equilibrium (CGE) model that has been specially designed to analyze the potential economic effects of India's policy reforms. The model was developed in a collaborative effort involving the National Council of Applied Economic Research in New Delhi and the University of Michigan. Patterned after the Michigan CGE Model of World Production and Trade that has been in use for more than two

decades the India CGE model features closer attention to special characteristics of India's economic structure including more agricultural sector detail allowance for state ownership and administered pricing The conclusions of the study suggest that the policy reforms will yield increased real returns to land labor and capital and shift the terms of trade in favor of Indian agriculture Lastly not only are there efficiency enhancing intersectoral shifts in resource allocation but there are notable increases in scale economies across the Indian manufacturing sectors Rajesh Chadha and Sanjib Pohit are Economists at the National Council of Applied Economic Research in New Delhi Alan V Deardorff and Robert M Stern are Professors of Economics and Public Policy University of Michigan
