## **Society For Neuroscience Abstr Volume 21 Pt1:**

Touched With Fire Kay Redfield Jamison, 1996-10-18 The definitive work on the profound and surprising links between manic depression and creativity from the bestselling psychologist of bipolar disorders who wrote *An Unquiet Mind* One of the foremost psychologists in America Kay Jamison is plainly among the few who have a profound understanding of the relationship that exists between art and madness William Styron The anguished and volatile intensity associated with the artistic temperament was once thought to be a symptom of genius or eccentricity peculiar to artists writers and musicians Her work based on her study as a clinical psychologist and researcher in mood disorders reveals that many artists subject to exalted highs and despairing lows were in fact engaged in a struggle with clinically identifiable manic depressive illness Jamison presents proof of the biological foundations of this disease and applies what is known about the illness to the lives and works of some of the world's greatest artists including Lord Byron Vincent Van Gogh and Virginia Woolf **Society for Neuroscience Abstracts** Society for Neuroscience. Woodruff-Pak, Joseph E. Steinmetz, 2007-05-08 Classical conditioning of the nictitating membrane NM eyeblink response in rabbits is a useful model system for the study of the neurobiology of learning and memory This paradigm that is so well described on a biological level has also been applied to studies of normal development over the life span and to instances of abnormal developmental phenomena Eyeblink conditioning has been studied from molecular and neural network perspectives and the paradigm is of demonstrated utility in elucidating mechanisms in physiology and pharmacology This model system provides a behavioral paradigm in animals that has a close analog in human behavior Perspectives of recent developments in human eyeblink classical conditioning research are presented in the companion volume to this book *Eyeblink Classical Conditioning Applications in Humans* Peptide Growth Factors and Their Receptors I Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject

by reading the primary literature At the same time it is becoming increasingly apparent that these of universal importance in biology and medicine and that the substances are original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters      Society for Neuroscience Abstracts Society for Neuroscience (U.S.). **Unsupervised Learning** Marian Stewart Bartlett,2012-12-06 Face Image Analysis by Unsupervised Learning explores adaptive approaches to image analysis It draws upon principles of unsupervised learning and information theory to adapt processing to the immediate task environment In contrast to more traditional approaches to image analysis in which relevant structure is determined in advance and extracted using hand engineered techniques Face Image Analysis by Unsupervised Learning explores methods that have roots in biological vision and or learn about the image structure directly from the image ensemble Particular attention is paid to unsupervised learning techniques for encoding the statistical dependencies in the image ensemble The first part of this volume reviews unsupervised learning information theory independent component analysis and their relation to biological vision Next a face image representation using independent component analysis ICA is developed which is an unsupervised learning technique based on optimal information transfer between neurons The ICA representation is compared to a number of other face representations including eigenfaces and Gabor wavelets on tasks of identity recognition and expression analysis Finally methods for learning features that are robust to changes in viewpoint and lighting are presented These studies provide evidence that encoding input dependencies through unsupervised learning is an effective strategy for face recognition Face Image Analysis by Unsupervised Learning is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry      Handbook of Stress and the Brain Part 1: The Neurobiology of Stress Thomas Steckler,N.H. Kalin,J.M.H.M. Reul,2005-03-24 The Handbook of Stress and the Brain focuses on the impact of stressful events on the functioning of the central nervous system how stress affects molecular and cellular processes in the brain and in turn how these brain processes determine our perception of and reactivity to stressful challenges acutely and in the long run Written for a broad scientific audience the Handbook comprehensively reviews key principles and facts to provide a clear overview of the interdisciplinary field of stress The work aims to bring together the disciplines of neurobiology physiology immunology psychology and psychiatry to provide a reference source for both the non clinical and clinical expert as well as serving as an introductory text for novices in this field of scientific inquiry Part 1 addresses basic aspects of the neurobiology of the stress response including the involvement of neuropeptide

neuroendocrine and neurotransmitter systems and its corollaries regarding gene expression and behavioural processes such as cognition motivation and emotionality Provides an overview of recent advances made in stress research Includes timely discussion of stress and its effect on the immune system Presents novel treatment strategies targeting brain processes involved in stress processing and coping mechanisms [List of Journals Indexed in Index Medicus](#) National Library of Medicine (U.S.),1996 Issues for 1977 1979 include also Special List journals being indexed in cooperation with other institutions Citations from these journals appear in other MEDLARS bibliographies and in MEDLING but not in Index medicus **Catalog of Copyright Entries. Raizada,2012-12-06 An essential element in the development and functional integrity of all organisms is intercellular communication This is achieved by the secretion of soluble messenger molecules which subsequently interact with receptor effector pathways in the responsive cells Hormones are traditionally defined as chemical messengers synthesized by endocrine glands Unlike hormones produced by endocrine glands growth factors are hormone related substances produced by many tissues and play an important role in controlling growth and development While the exact physiological roles of growth factors have yet to be elucidated they play important roles in the regulation of cellular proliferation and or differentiation during ontogenesis growth and differentiation During recent years there has been a substantial increase in research related to peptide growth factors their receptors and modes of action With the discovery and characterization of numerous growth factors it became clear that these growth factors had multiple features in common with classic hormones as well as with oncogenes Furthermore there are distinct families of growth factors based either on structural or functional similarities [Schizophrenia Bulletin](#) ,2003 [Cognition, Computation, and Consciousness](#) Masao Ito,Yasushi Miyashita,Edmund T. Rolls,1997-05-29 The topic of consciousness is truly multidisciplinary attracting researchers and theorists from diverse backgrounds It is now widely accepted that previously disparate areas all have contributions to make to the understanding of the nature of consciousness Thus we now have computational scientists neuroscientists and philosophers all engaged in the same effort This book illustrates these three approaches with chapters provided by some of the most important and provocative figures in the field The first section is concerned with philosophical approaches to

consciousness One of the fundamental issues here is that of subjective feeling or qualia The second section focuses on approaches from cognitive neuroscience Patients with different types of neurological problems and new imaging techniques provide rich sources of data for studying how consciousness relates to brain function The third section includes computational approaches looking at the quantitative relationship between brain processes and conscious experience Cognition Computation and Consciousness represents a uniquely integrated and current account of this most fascinating and intractable subject
