Sociocybernetics Volume :

Sociocybernetics Rudolf F. Geyer, Johannes van der Zouwen, 2001-01-30 In an effort to shed light on recent developments in sociocybernetic research this volume represents recent and advanced thinking in this rapidly developing field The authors address the core problems in social science caused by increasing societal complexity and analyze the inadequacy of many of the methodological tools still used for grappling with nonlinear self organizing systems Together the 18 contributors propose elements of a new methodology based on sociocybernetic principles aimed at describing and explaining the growth of societal complexity the contribution of autopoiesis of societal subunits to more societal complexity and the new simulation based methodology needed to observe complex social systems This unique volume contributes to a greater understanding of sociocybernetics and its uses as a method for researching modern problems of increasing complexity and interdependence The first part of the book deals with increasing societal complexity and contains chapters on its overall development the complexity of brain environment interaction loops organizational change the development of human values and the increasing interpenetration of societal subsystems The second part concentrates on a current issue in sociocybernetics autopoiesis or self production The chapters included in Part II concentrate on embodied cognition on the applicability of autopoiesis to business firms on its roots in Aristotelian philosophy and on the possibility of societal control and steering in democratic societies Part III more focused on methodology discusses the difficulties inherent in observing complex social systems The chapters deal with the problems of cross cultural comparative research simulation of the evolution of social systems longitudinal simulation of education systems and the methodological difficulties associated with analyzing the unexpected complexities of mutually interacting nonlinear systems

Sociocybernetics John A. Busch, Gladys Masih Busch, 1992 a very fine volume a welcome contribution to the burgeoning literature on sociocybernetics Prof Kenneth D Bailey University of California Los Angeles an excellent introduction to the kind of thinking that students need to master in order to grasp the complexity of our global society Prof Michael Schwalbe North Carolina State University What leads so many of us to try use magic bullets to solve our social personal problems How do we know that our way of thinking is correct The sociocybernetic perspective provides a view of the world that can help us understand this increasing complexity manage it in our personal group life SOCIOCYBERNETICS compares scientific approaches other ways of understanding the material world noting the weaknesses in each Sociocybernetics is the humanistic application of the principles of cybernetics to understanding people human societies It is the task of SOCIOCYBERNETICS to show the awesome power of perspective introduce new ideas concerning the scientific understanding of the human condition to make this introduction accessible to the average person Anyone interested in the foundations of any of the social sciences or in a perspective permitting interdisciplinary general education will find this perspective invaluable

Systems Science and Cybernetics - Volume II Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a

number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which

Sociocybernetic Paradoxes R. Felix Geyer, Johannes van der Zouwen, 1986-07 In this stimulating work thirteen distinguished scholars examine and aim to reconcile the paradox that social systems tend to steer themselves with the knowledge that they are at the same time subject to steering and control from outside Sociocybernetics is the term they have coined to describe the tools used in the analysis of this paradox tools which have themselves evolved from and influenced cybernetics and general systems theory Sociocybernetic Paradoxes surveys both the possibilities and limitations of cybernetics in the analysis and treatment of social problems Part One looks at concrete experiences of the steering of specific social systems Part Two examines the planning hierarchy and views of soci

The Performance of Social Systems Francisco Parra-Luna, 2012-12-06 It can be said that the concept of performance of social systems is one of the most relevant since all social systems from the family through the enterprise to the Nation state are only interesting in obtaining as high a performance as possible The difficulties encountered when dealing with the concept of performance have been recognized and few books until now ventured to tackle the task mainly because of the following three big problems the lack of a theoretical operational model the lack of valid data and the lack of computer facilities Today these obstacles have been overcome and this is the first book based on different systemic perspectives value theory modelling observation and quantification which offers the possibility of defining and working out the concept The book should be of great interest to sociologists political scientists economists organizational theorists managers and politicians
